Hello, I'm Reinhold 23.02.2015 01:40

I refer to this Freescale file relating a so called "Digibutle kit" hardware platform ...

http://www.freescale.com/files/microcontrollers/doc/support_info/DIGIBUTLER_2.pdf

... and there in page 2 of 6 ...

"Compilation and (re)flashing the MCF52231 requires

CodeWarrior Development Studio for Coldfire Architectures, v. 6.3.

CodeWarrior is an integrated development environment which includes a project manager, editor, compiler and debugger.

Version 6.3 is a free download.

At ref. [1] it's marked as "Updates and Patches" but Elektor has 'inside information' that it's actually a full install version!

The download is about 140 MB. "

I am a teacher at => <http://www.HTL-donaustadt.at>

Two of my students need to recompile Eric Gregory's (=>Freescale) Code for the "DigiButler kit" in order to extend the "Digibutle kit" firmware functionality.

The reference [1] as given in the file mentioned above does not land at freescale webpage any more.

Hello, I'm Reinhold

Questions 1: is the page titled "*CodeWarrior for Microcontrollers (Classic IDE) - RS08/HC(S)08, ColdFire V1 v6.3*"

see link...

[CodeWarrior for Microcontrollers-Classic IDE|Freescale](#)

... the web site in order to download the ...

"CodeWarrior Development Studio for Coldfire Architectures, v. 6.3."

... as mentioned in the PDF-File?

Questions 2: If so, and having a look at web site ...

<https://freescale.flexnetoperations.com/control/frse/download?element=5901331>

...

which of the 13 files shall I download in order to get the CW IDE as needed for Freescale's MCU with part number "MCF52231"

(i.e. the MCU residing at the target "Digibutle kit")?

Hello, I'm Reinhold

Questions 3: Further more, we want to flash the target "Digibutle kit"(=> it supports a 26 pin Coldfire BDM port) with the "USB-ML-UNIVERSAL"; this programmer device I've ordered and (already) received from "P&E Microcomputer Systems, Inc." (=> www.pemicro.com).

Will the "*CodeWarrior for Microcontrollers (Classic IDE) - RS08/HC(S)08, ColdFire V1 v6.3*" support the "USB-ML-UNIVERSAL" programmer.

Thx for help in advance,

and best regards,

Reinhold.
