AGENDA

- H-Bridge Motor Drivers introduction
- Applications
- HB2000 / 2001 system block diagram and key features
- Live demonstration of current limit
- Roadmap
- Functional Safety
- Enablement tools

H-BRIDGE MOTOR DRIVERS INTRODUCTION

Motor Basics – H-Bridge / Brushed DC

Basic Motor Operation

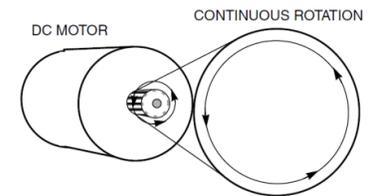

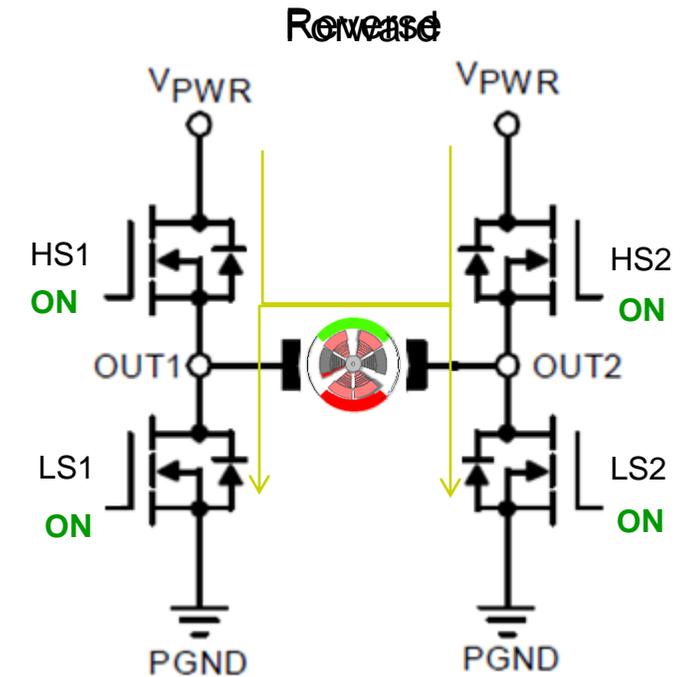

Main focus of our portfolio

- Brushed DC, Brushless DC, some Stepper

Important considerations for motor drivers

- Voltage & current operation range; will vary depending on load (motor)
- Number of outputs
- Switching frequency; trade-off between noise and efficiency

NXP offers integrated solution combining analog, digital and power MOSFETs into a turnkey solution

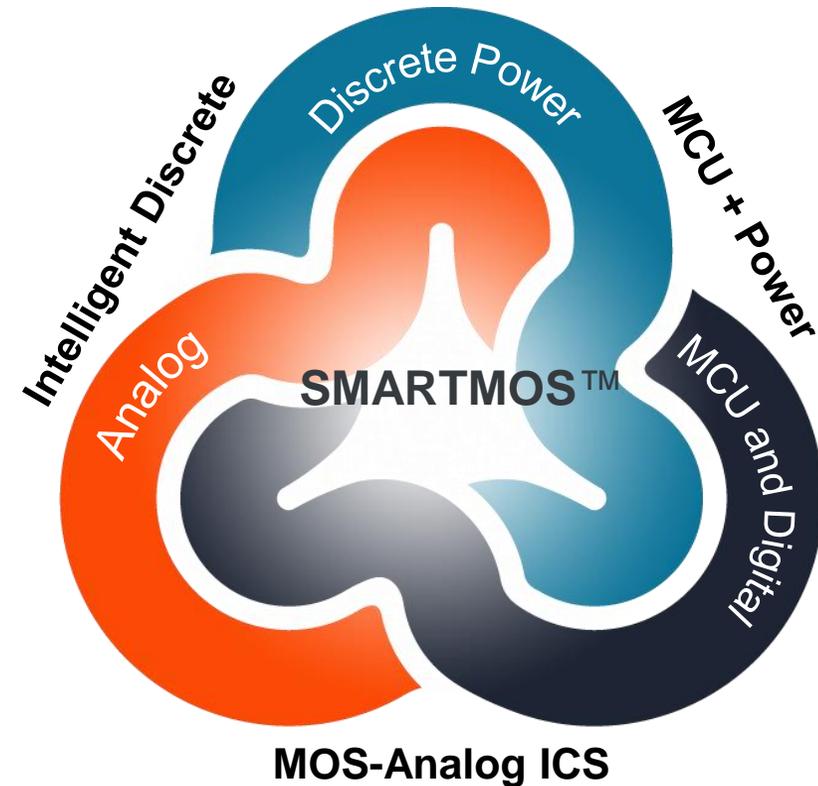

An H-bridge is an electronic circuit that enables a voltage to be applied across a load in either direction.

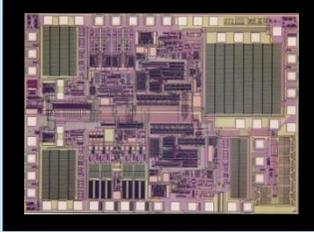

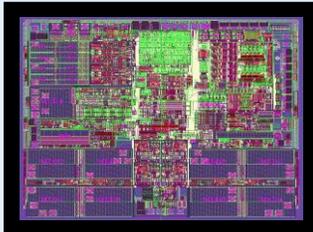

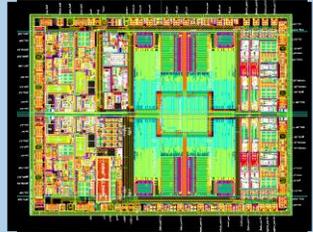

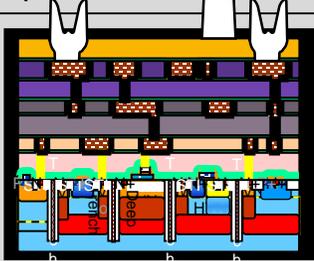

SMARTMOS™ Technology Integration

More than driving loads

- Cost effective high voltage (110 V) power analog embedded system process platform
- Low $RDS_{(ON)} \cdot A$ (30 m Ω -mm²) for thermal efficiency in high current applications
- High precision for sensor interface integrated with power applications
- Advanced isolation capability (-40 V) and robust system transient ESD/EMC immunity
- Low power devices to reduce overall system power consumption
- Extreme temperature operation for harsh application environments (-40 to +175°C)

SMARTMOS Evolution

Logic Density	1.1 K	2.0 K	25.0 K	90.0 K
Voltage Capability	65 V	105 V	45 V	105 V
45V Power R _{dson} *A	90 mΩ·mm ²	67 mΩ·mm ²	40 mΩ·mm ²	30 mΩ·mm ²
Isolation Voltage	65 V (Junction)	105 V (Junction)	80 V (Trench)	105 V (Trench + SOI)
				
	SMOS5AP 1996 (0.8 μm)	SMOS5HVP 2002 (0.7 μm)	SMOS8MV 2006 (0.25 μm)	SMOS10HV 2013 (0.13 μm)

Customer Challenge

33926PNB (PQFN) Single
33931EK & 931SEK (SOIC) Single
33932EK & 33932SEK (SOIC) Dual

Driver protects against thermal damage when motor is binding or under heavy loads

- Package offers lowest thermal resistance < 1°C/W
- Current & temperature of MOSFETs monitored using real time current mirror
- When at ILIM device will start to switch (PWM) MOSFETs
- At 165°C device will thermal fold back to 4.2 A or less
- At 185°C device will shut down when temperature exceeds safe operation range

Thermal Management – For Motor and Device Protection)

PWM switching to 6.5 A at < 165°C

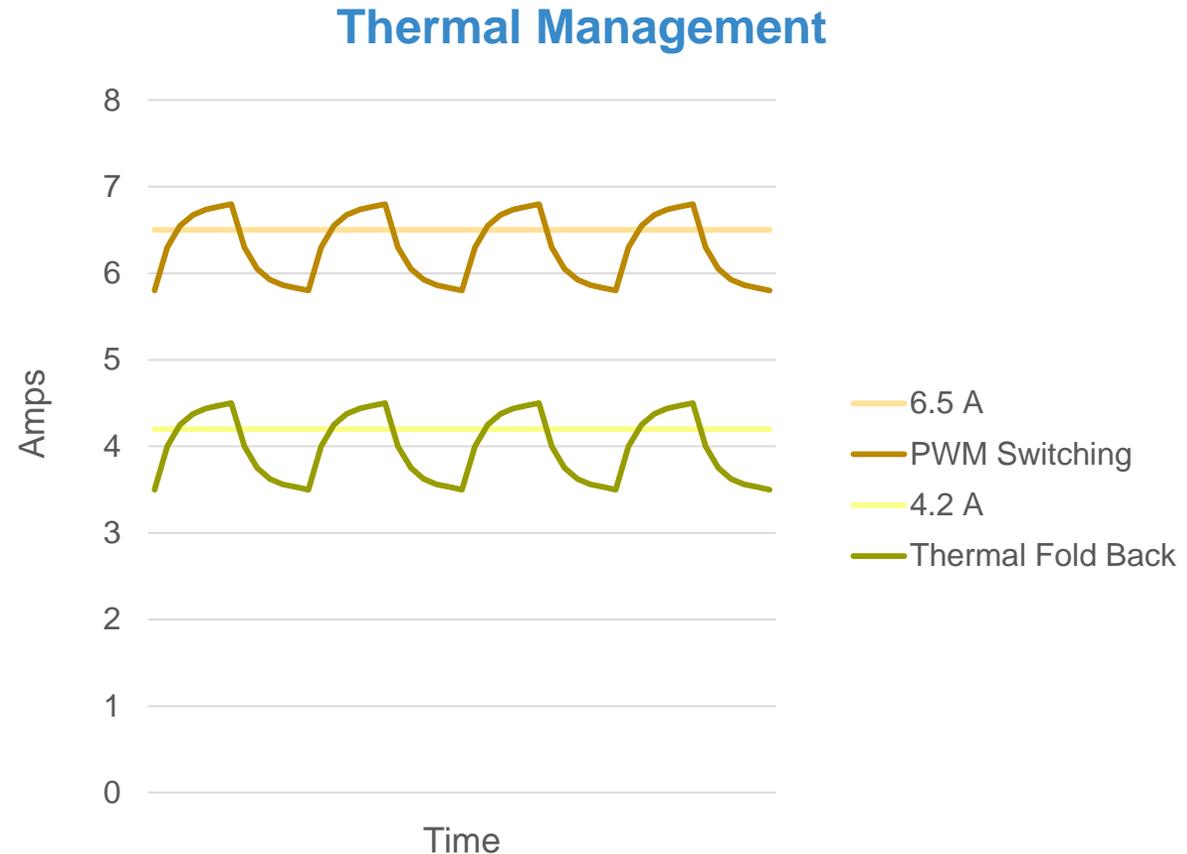

- Below 165°C, the device PWMs the outputs, averaging under 6.5 A to reduce thermals while continuing operation

Thermal fold back to 4.2 A at > 165°C

- Above 165°C, the device goes into thermal fold back, averaging under 4.2 A or lower to reduce thermals while continuing operation

Thermal shutdown at 185°C

- Above 185°C, the device shuts down

Applications

MC33HB2000 and MC33HB2001

-  Automotive
-  Industrial
-  Key applications

Driver Segment – Standard ICE Powertrain Electrification

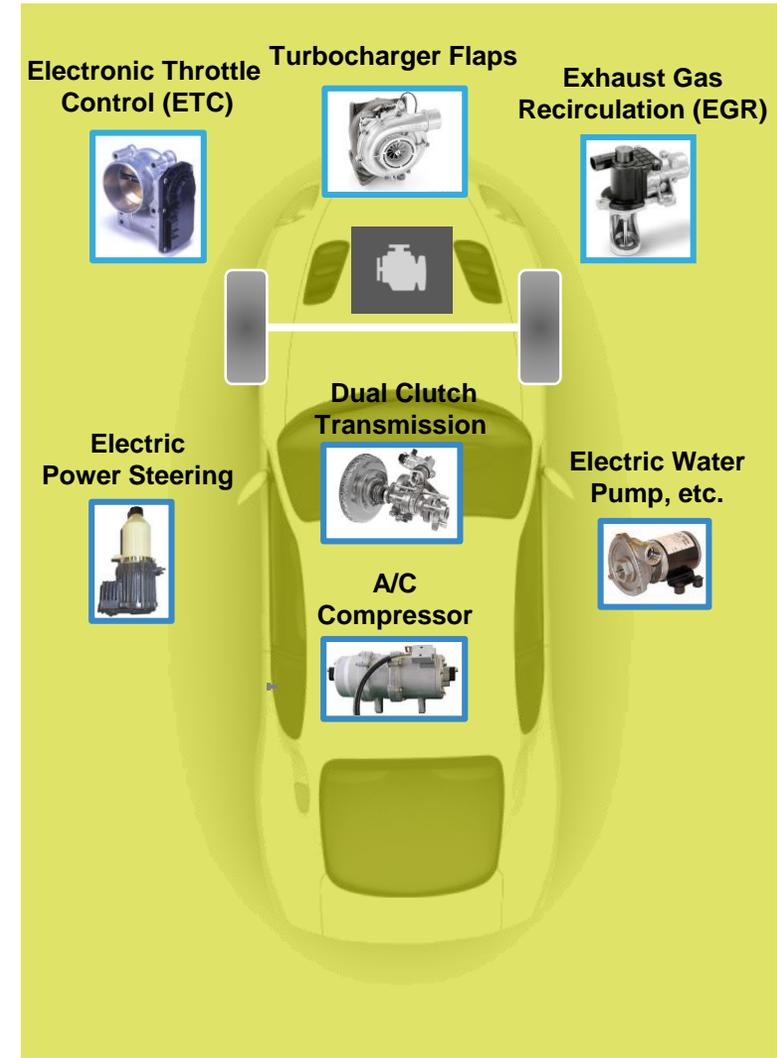

Key Applications and Products

Brushed DC Motor Control

- Key H-Bridges Drivers Applications
 - MC33926, MC33931, MC33932
 - MC33HB2000, MC33HB2001 (Q1'16 release)

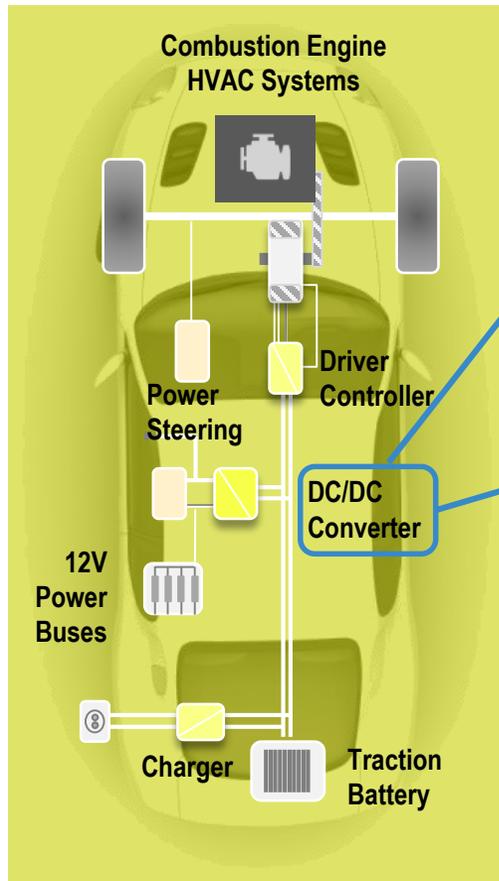

Brushless DC Motor Control

- These applications are primarily 3-Phase Gate Driver, but can be H-Bridge
 - MC33937
 - MC33GD3000 (Q4'15 release)
 - MC33GD3601 (TBD)

Driver Segment – Products for Powertrain Electrification

Key Application for 48 V HEV MOSFET GDIC and HV IGBT GDIC

48 V Mild-Hybrid (HEV) & Torque-Assist Systems Permanent Magnetic Synchronous Motors (PMSM) & Switched Reluctance Motors (SRM)

- MC33GD3200 (NPI for PMSM)
- MC33GD3201 (NPI for SRM)
- MC33GD3601 (NPI)

Electric Vehicle (EV) High-Power Inverters & Plug-In Hybrid HV IGBT Gate Driver

- MC33GD3100 (NPI)

MC33HB2000 & 2001 Target Applications

Target Applications: Robust, Remote, Critical

Automotive Throttle

Product Function

- Electronic Throttle Control (ETC)
- Bi-directional control of butterfly valve to regulate Air Flow in drive by wire systems

Other Auto

Product Function

- Cruise Control
- Electronic Gas Recirculation (EGR)
- Multi-Port Injection (MPI) Flaps Control
- Gasoline Direct Injection (GDI) Swirl and Whirl Flaps

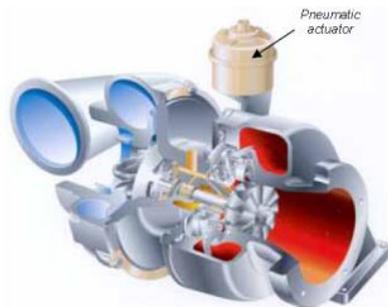

Industrial

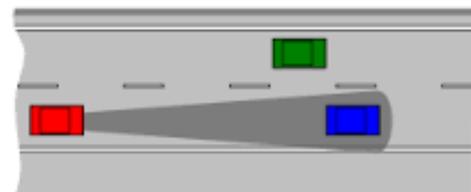

Product Function

- Medical
- Down hole / Avionics
- Robotics
- Home Automation
- Rolling Doors
- Where voltage and current matches the application

MC33HB2000 & HB2001 Automotive Applications

Electronic Gas Recirculation

Cruise Control

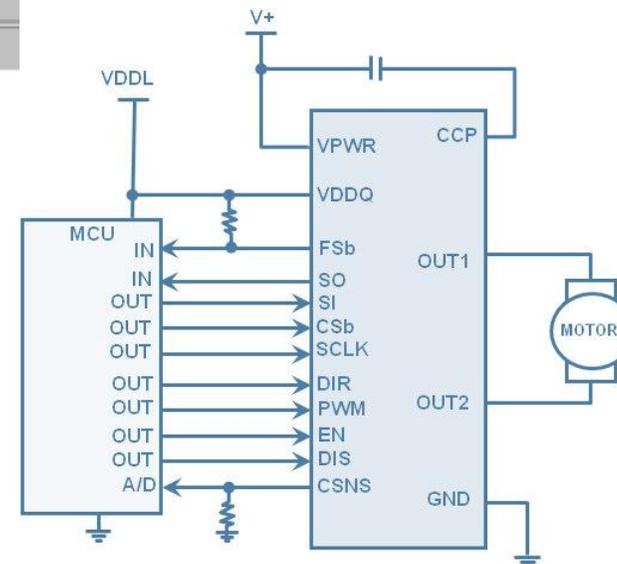

Turbocharger Flaps

Throttle Control

Rear Window Wiper

- Brushed DC motor
- Robust Operation

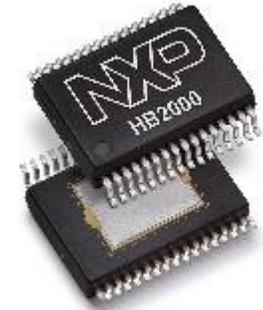

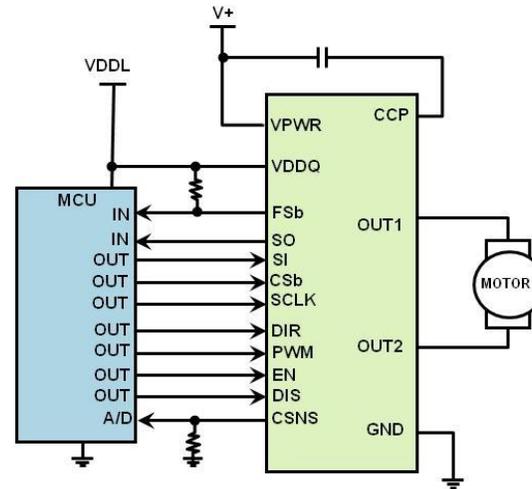

SYSTEM BLOCK DIAGRAM AND KEY FEATURES

HB2000/HB2001 Key Features

The HB2000/1 are advanced H-Bridge Motor Driver designed to provide enhanced safety features for high-safety integrity, SPI control for improved flexibility, and thermal management for continuous operation

- Differentiating Points
 - First part designed to support ISO26262 ASIL D
 - 4X more accurate real time current feedback ($\pm 5\%$)
 - 53% lower RDS(ON)
 - 50% lower thermal resistance $< 1^\circ\text{C/W}$
 - 42% smaller package
 - Widest slew rate selection for continuous operation
 - Patented thermal protected current limit
 - Pin for Pin drop-in replacement for flexibility
- Product Features
 - 4.5 – 28 V supply, 40 V transient
 - MB33HB2000: 120 m Ω typical
 - MB33HB2001: 65 m Ω typical (best in industry)
 - SPI selectable current limits: 5.4 / 7.0 / 8.8 / 10.7 A
 - SPI selectable slew rates: 0.25, 0.5, 1, 2, 4, 8, 16 V/ μs & bypass
 - Two packages: 8 x8x1.2 mm PQFN and
 - 10x11x1.2 mm SOIC-EP Package

PART #	PKG	RELEASE
MC33HB2000EK	SOIC 32	Q1'16
MC33HB2000FK	PQFN 32	Q2'16
MC33HB2001EK	SOIC 32	NOW
MC33HB2000FK	PQFN 32	Q2'16

Typical Applications

- Electronic Throttle Control
- Electronic Gas Recirculation
- Turbo Flap Control

HB2000 & HB2001 H-Bridge Circuit Block Diagram

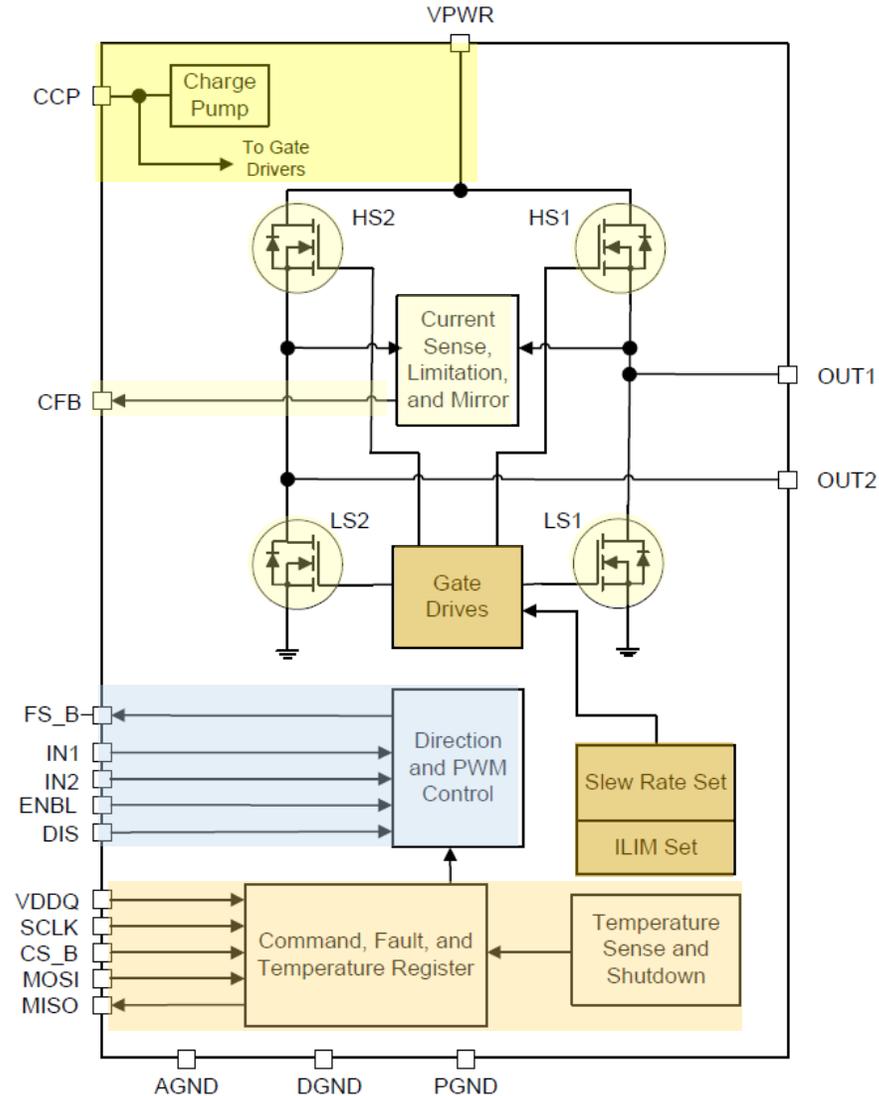

VPWR (Power Supply Input)
 $5\text{ V} < \text{VPWR} < 28\text{ V}$ ($\text{UVLO} < \text{VPWR} < 40\text{ V}$)

CCP (Charge Pump Capacitor connect pin) CCP
 $\text{Clamp} = \text{VPWR} + 12\text{V}$

CFB (Current Mirror Output)
 $\pm 5\%$ current accuracy @ $2\text{ A} < \text{Iload} < 10\text{ A}$

FS_B (Fault output, open drain)
IN1, IN2 (Output Control)
 Two control modes support by SPI
H Bridge Mode (Default)
 IN1=Direction control, IN2=PWM input
Half Bridge Mode
 IN1=OUT1 control, IN2=OUT2 control
ENBL (IC Enable)
DIS (Output Disable)

VDDQ (P/S for SPI_MISO output)
SCLK, CS_B, MOSI, MISO (SPI Communication I/O)
 Supports configuration, check fault status and daisy chain connection.

Rdson @ $8\text{ V} < \text{VPWR} < 28\text{ V}$,
 $T_J = 150^\circ\text{C}$, $\text{Iload} = 3\text{ A}$

125 mΩ (33HB2001)
 235 mΩ (33HB2000)

Programmable Slew Rate
 Bypass / 16 / 8 / 4 / 2 / 1 / 0.5 / 0.25 V/us

Programmable Current Limit
 5.4 / 7.0 / 8.8 / 10.7 Amps

HB2000 & HB2001 Performance Enhancements

- High speed daisy chainable 10 MHz SPI
- Any status bit can be programmed to feedback via status pin for full configurability
- Selectable Overvoltage Protection
 - May be disabled to extend voltage range
 - Available as warning only in half-bridge control mode
 - Full bridge mode protection goes to HS recirculation
- Functional 4.0 V to 40 V (UV during crank to max rating)
- HB2000 and HB2001 are 100% pin and function compatible
- Thermal impedance $q_{JC_bottom} < 0.8 \text{ } ^\circ\text{C/W}$
- I/O withstands 36V
- Safety: Supports ISO26262 safety feature in full bridge mode

HB2000 & HB2001 Enhanced Diagnostics

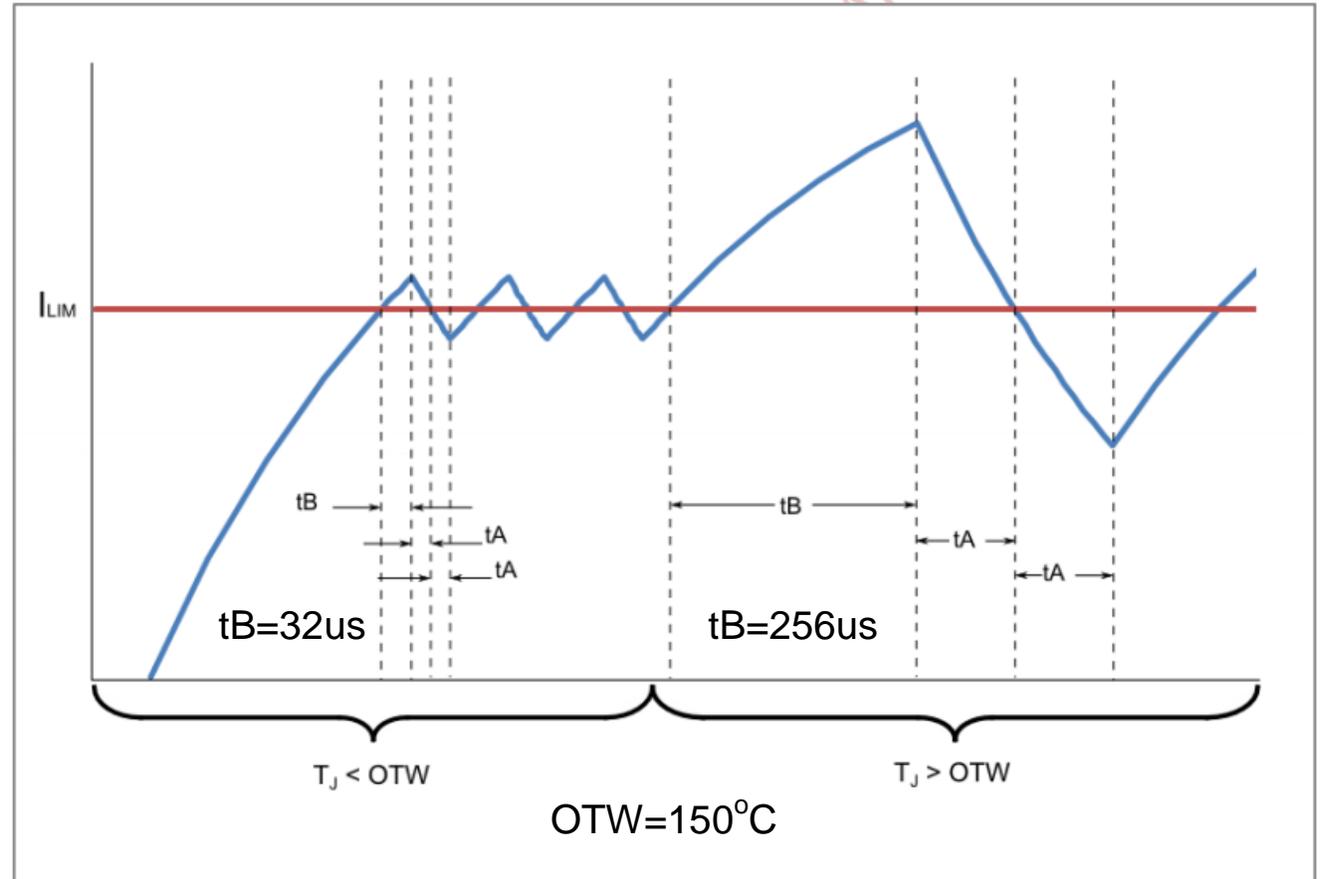

- SPI register always provides detailed status bits
 - Over Temperature Shutdown
 - Thermal Warning
 - Over Current
 - Open Load (in standby mode and in normal full H-bridge operating mode)
 - Short Circuit to Ground Output 1
 - Short Circuit to Ground Output 2
 - Short Circuit to Power Output 1
 - Short Circuit to Power Output 2
 - Vpwr Over Voltage
 - Vpwr Under Voltage
 - Charge Pump Under Voltage
 - SPI Framing Error

HB2000 & HB2001 Active Current Limit

Programmable Current Limit

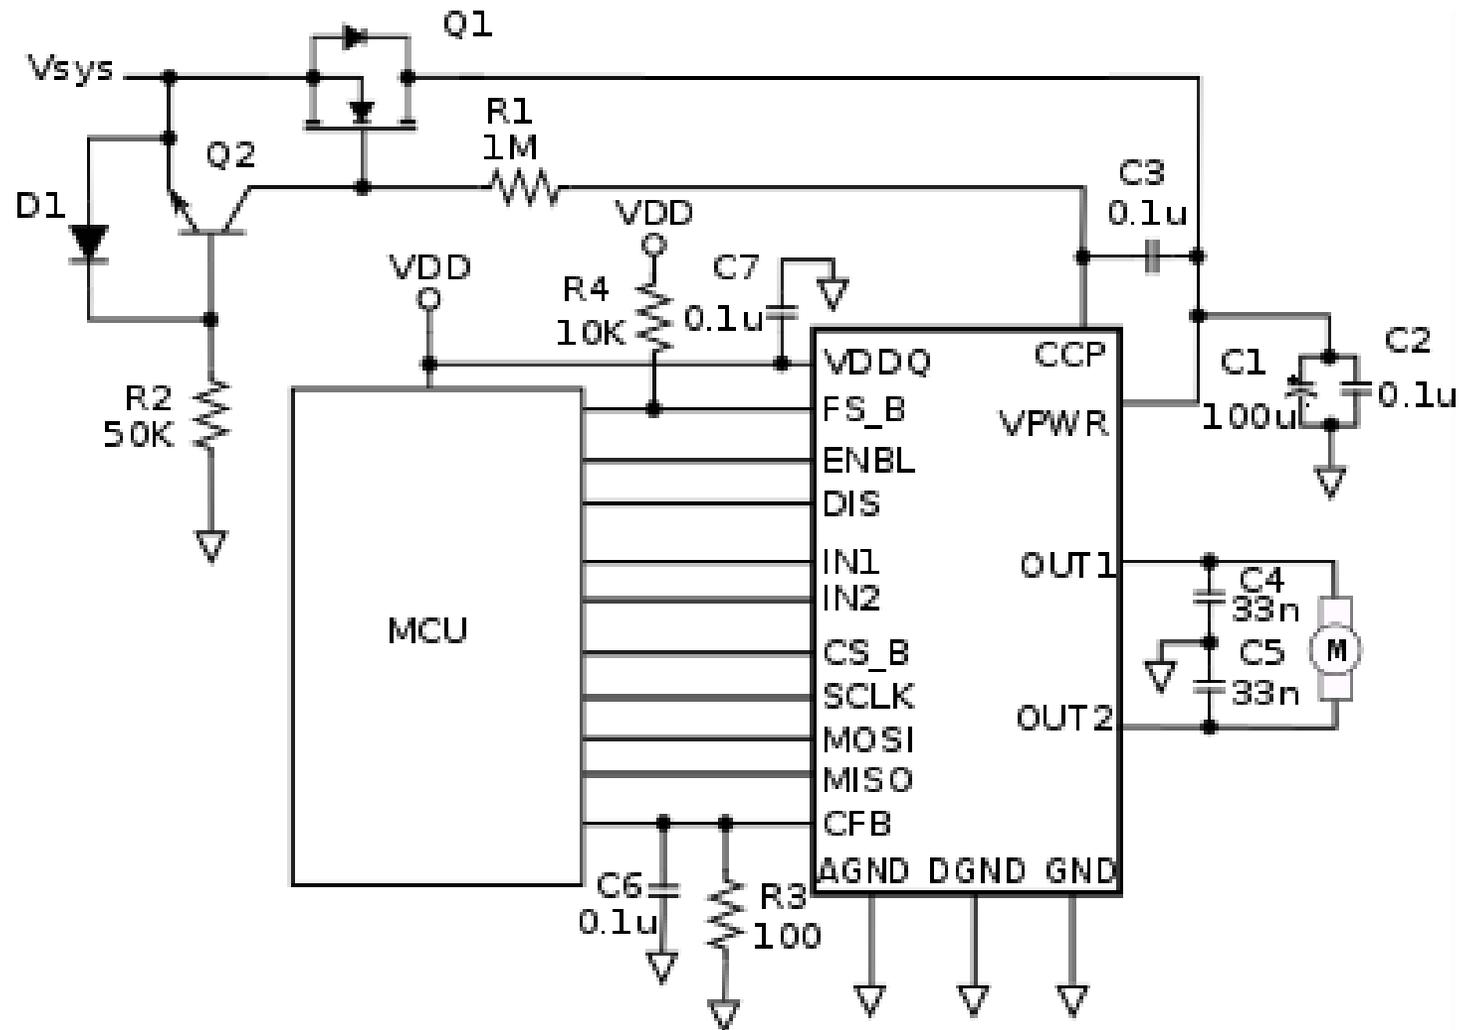

- 4 settings from nominal 5.4 A to 10.7 A average
- Short Circuit threshold scales up/down as per the current limit selected
- Patented thermal management does not compromise the current set point

Setting	I_{LIM}	Short Circuit HS	Short Circuit LS	Units
00	5.4	11.9	10.9	A
01	7.0	13.5	12.5	A
10	8.8	15.3	14.3	A
11	10.7	17.2	16.2	A

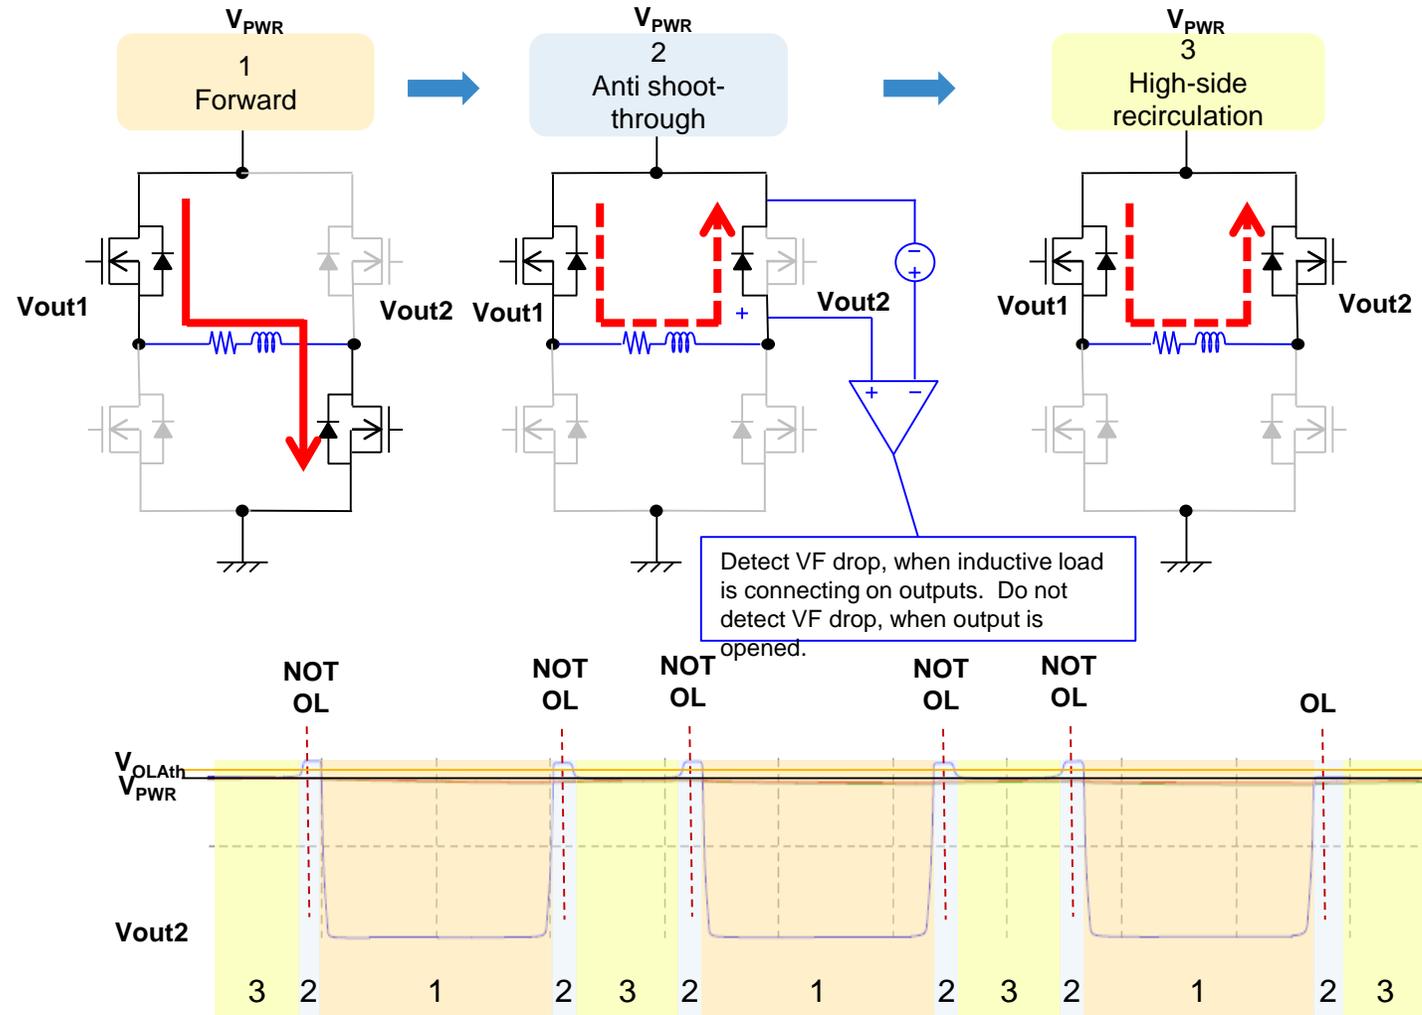

I_{lim} Timing and Thermal response

HB2000 & HB2001 Supports external N-Channel MOSFET for reverse battery protection

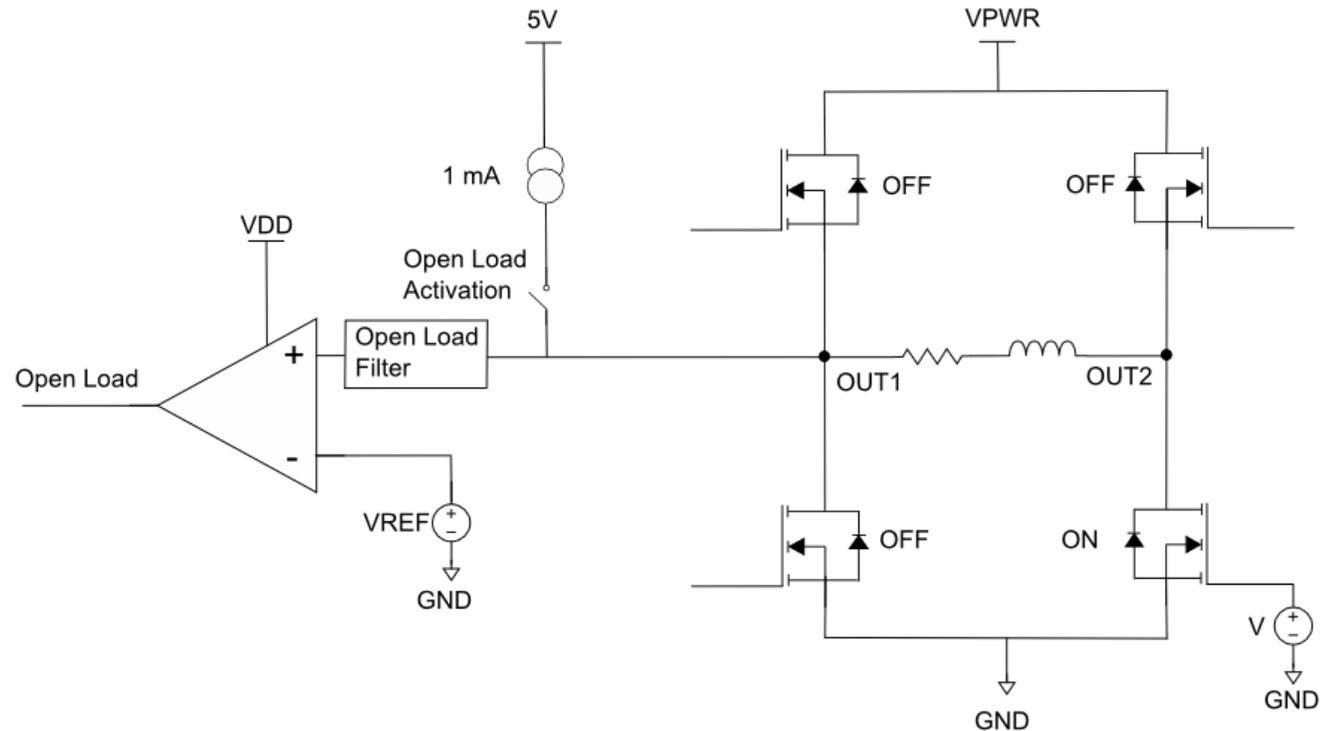

HB2000 & HB2001 Active-mode Open Load Detection Diagram

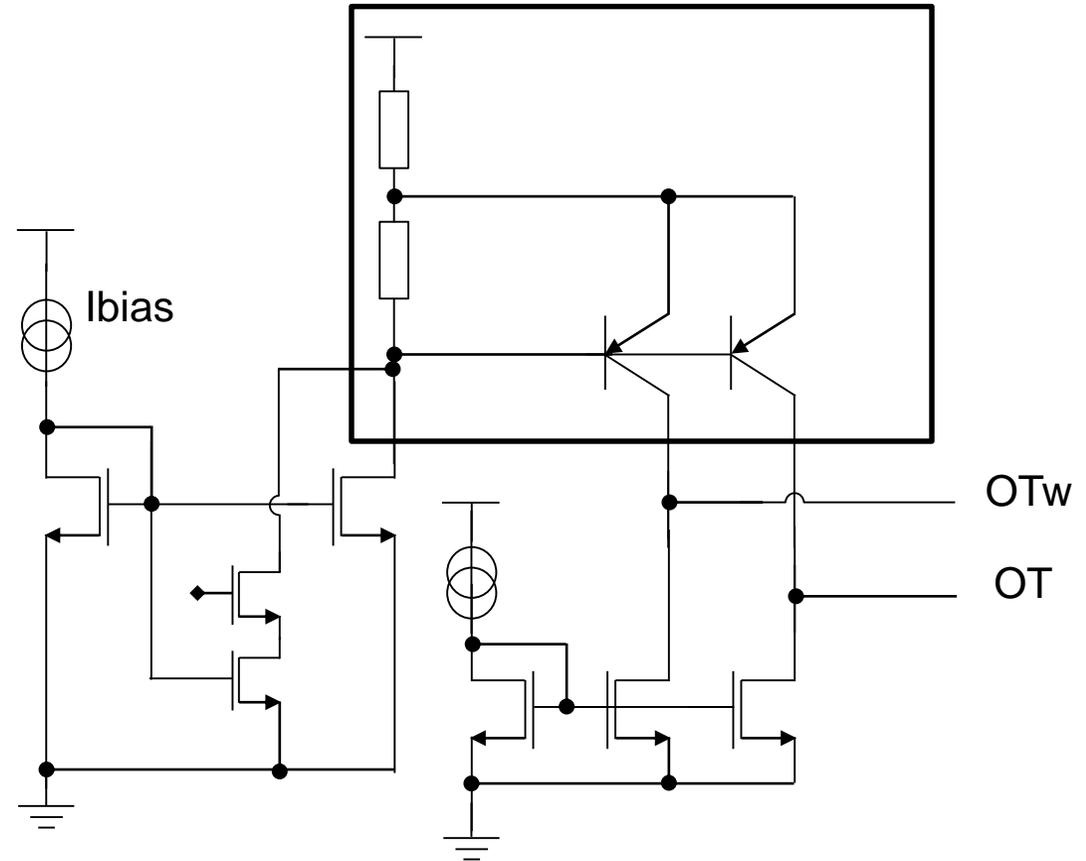

HB2000 & HB2001 Stand-by Mode Open Load Detection

- Operates in Standby mode in H-Bridge mode
- Designed for applications having less than 50 nF from OUT1 and OUT2 to GND
- Load inductance < 15 mH, and an equivalent load resistance of 600 Ω (typical)

Real Time Temperature Monitoring for Power FETs

- Continuously monitors the temperature of each of the 4 power FETs for Over-temperature warning (Otw) and Over-temperature shutdown (OT).
- Enables patented temperature dependent current limiting circuit to cool down the part without compromising on current drive capability at elevated device temperature.

LIVE CURRENT LIMIT DEMONSTRATION

ROADMAP

MC33926ES New Package Proposal

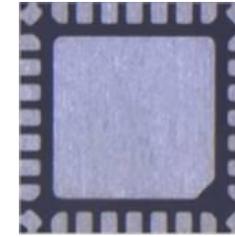

Thermally efficient 28 V/5 A H-Bridge DC motor driver featuring real-time load current monitoring and automatic thermal back-off ensures high availability operation in demanding high current, harsh environment applications

Differentiating Points

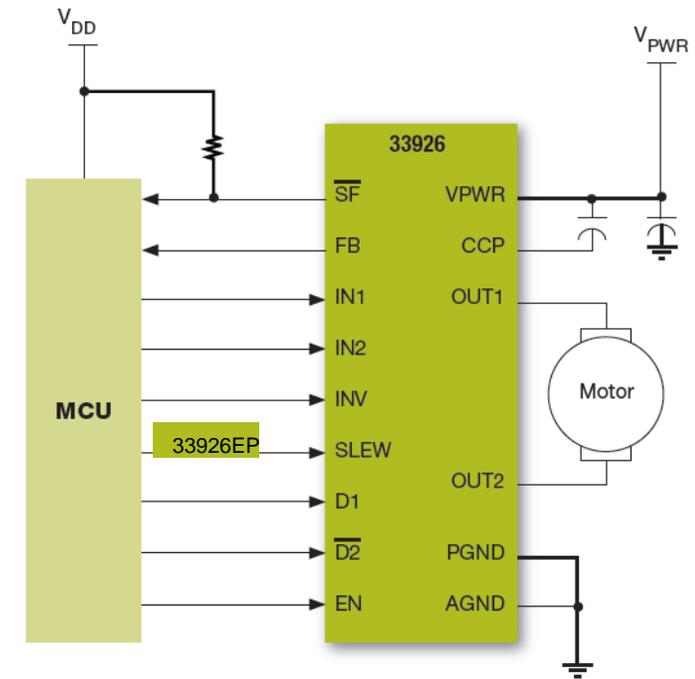

- Current mirror – 1/400 out from current flowing in MOSFET
- Over current limit – via internal constant-off-time PWM
- Over temperature protection – current fold back at 165°C
- Temperature dependent shut down – at 185°C
- Short to PWR, Short to GND, UVLO, Open Load Detect
- Selectable Slew Rate Control (11 or 20kHz)

Product Features

- H-Bridge configuration for bi-directional motors
- 5 to 28 Volt continuous; to 40 V transient operation
- 5 Amp peak output current
- 235 mΩ maximum @ Tj=150°C, 120 mΩ typical RDS(ON) @ Tj=25°C (for each H-Bridge MOSFET)
- 3 and 5 V TTL/CMOS logic compatible inputs
- Protected against common failure conditions
- Available with and without inspectable fillets
- Theta JC - tbd

28-Pin, QFN
6x6 mm
(proposal)

PART #	PKG	SAMPLES	RELEASE
MC33926ES	QFN28	NOW	Q4'16

Typical Applications

- Electronic Throttle Control
- Electronic Gas Recirculation
- Turbo & Swirl Flap Control

MC33HB2000 & MC33HB2001 New Package

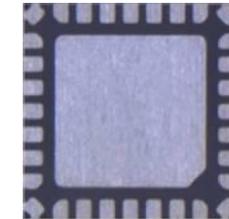

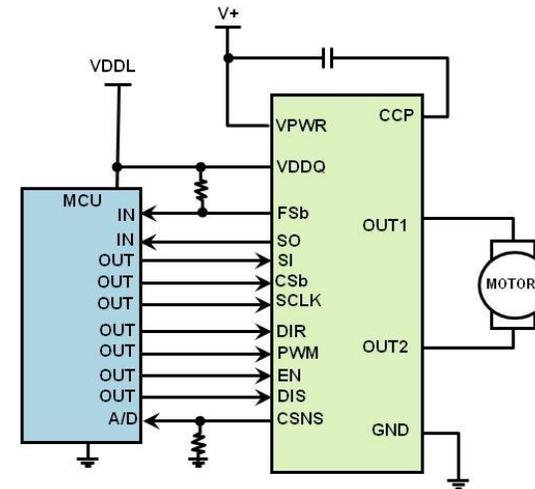

The MC33HB2000/1 are advanced H-Bridge Motor Driver designed to provide enhanced safety features for high safety integrity, SPI control for improved flexibility, and thermal management for continuous operation

Differentiating Points

- First ISO26262 Qualified
- Most accurate real time current feed back (5%)
- Lowest RDS(ON)
- Smallest package
- Widest slew rate selection for continuous operation
- Patented thermal protected current limit
- Pin for Pin drop-in replacement for flexibility

Product Features

- 4.5 – 28 V supply, 40 V transient
- MB33HB2000EJ: 120 mΩ typical
- MB33HB2001EJ: 65 mΩ typical (best in industry)
- SPI selectable current limits: 5.4 / 7.0 / 8.8 / 10.7 A
- SPI selectable slew rates: 0.25, 0.5, 1, 2, 4, 8, 16 V/μs & by-pass
- New package: 6x6 mm, 28ld, thermal resistance target < 1°C/W

28-Pin, QFN
6x6mm
(proposal)

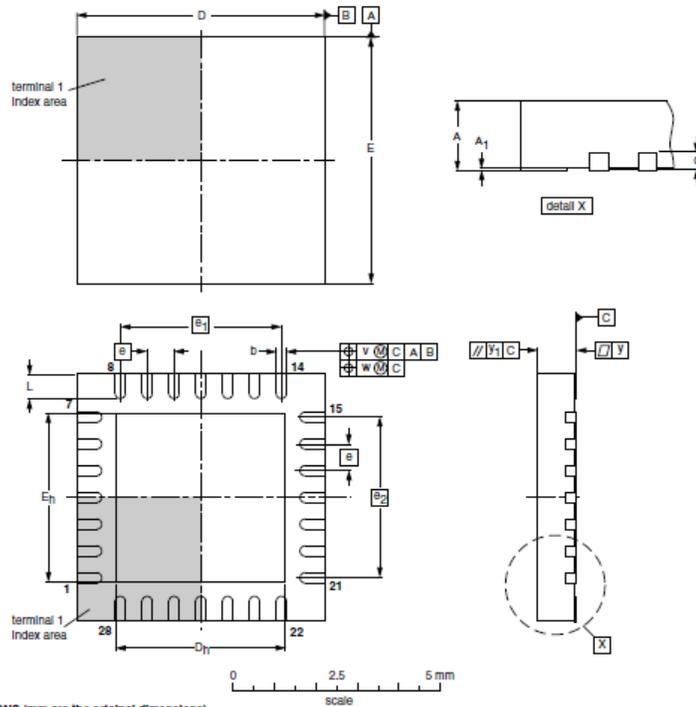

Typical Applications

- Electronic Throttle Control
- Electronic Gas Recirculation
- Turbo Flap Control

HB2000 & HB2001 SPIGen GUI

The screenshot displays the SPIGen GUI interface. At the top, there is a menu bar with 'File', 'Edit', 'View', 'Configuration', 'USB to SPI Dongle', and 'Help'. Below the menu bar is a toolbar with various icons. The main window is divided into several sections:

- SPI Words:** Two 16-bit registers for 'SPI Word Sent' and 'SPI Word Received', each with bits 15 down to 0. Below them are checkboxes for bit values, with a blue box set to '= 1'.
- Device View:** A tree view on the left showing a hierarchy of device folders: 'Generic', 'MC33813', 'MC33814', 'MC33816', 'MC33909', 'MC33978', 'MC33HB2001', and 'MC33PT2000'. Each folder contains sub-items like 'Single Command', 'Batch Commands', 'Commands', 'Configuration', 'Tristate', 'SG Wetting Level', 'SP Wetting Level', 'Cont Wet Enable', 'Interrupt Enable', 'LPM Configuration', 'LPM Wakeup Enable', 'LPM Comp Only', 'LPM VT Level', 'LPM Poll Level', 'LPM Slow Poll', 'LPM Debounce', 'Amux', 'Sequential Command', and 'Registers'.
- Device Identification:** A 'Read' button and a row of 14 input fields with values: 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, RV3, RV2, RV1, RV0.
- Status:** 'Read', 'Write', and 'Clear Bits' buttons, followed by a row of 14 input fields: TEST, FRM, CP_UV, UV, OV, SCP2, SCP1, SCG2, SCG1, OL, OC, TW, OT.
- Fault Status Mask:** 'Read', 'Write', and 'Clear Bits' buttons, followed by a row of 14 input fields: 0, FRM, CP_UV, UV, OV, SCP2, SCP1, SCG2, SCG1, OL, OC, TW, OT.
- Configuration and Control:** 'Read', 'Write', and 'Clear Bits' buttons, followed by a row of 14 input fields: CL, TM, AL, ILIM1, ILIM0, SR2, SR1, SR0, EN, MODE, INPUT, VIN2, VIN1.
- SPI Control:** 'Direction' dropdown (Forward), 'Input Control Selection' dropdown (Parallel), 'Current Limit' dropdown (6.7), 'Input Control Mode' dropdown (H-Bridge), and 'Slew Rate' dropdown (2.0).
- Open Load Test:** 'Activate' dropdown (No).
- Parallel Control:** 'Enable' (Yes/No), 'Direction' (Forward/Reverse), 'Disable' (No/Yes), and 'Recirculation' (High-Side) controls.
- PWM Freq:** Input field (5000).
- Duty Cycle (%):** A slider control ranging from 10 to 90.
- Current Feedback:** A digital display showing '0.00', 'Read Current' button, and 'Read Current Continuously' button.
- Status Fault:** A green indicator light and the text 'Status Fault'.
