## 3. SUMMARY OF THE PERFORMED TESTS

| ELECTRICAL LEGACY                    |          |
|--------------------------------------|----------|
| Upstream Full Speed Signal Quality   | passed   |
| Device Inrush                        | passed   |
| Device Back Voltage                  | passed   |
| Downstream Full Speed Signal Quality | passed   |
| Downstream Low Speed Signal Quality  | passed   |
| Drop                                 | passed   |
|                                      |          |
| ELECTRICAL HIGH SPEED                |          |
| Upstream High Speed Signal Quality   | passed   |
| Device Packet Parameters             | passed   |
| Device CHIRP Timing                  | passed . |
| Device Suspend/Resume/Reset Timing   | passed   |
| Device Test J/K, SEO_NAK             | passed   |
| Device Receiver Sensitivity          | passed   |
| Downstream High Speed Signal Quality | passed   |
| Host Packet Parameters               | passed   |
| Host CHIRP Timing                    | passed   |
| Host Suspend/Resume/Reset Timing     | passed   |
| Host Test J/K, SE0_NAK               | passed   |
| DEVICE FRAMEWORK USBCV               |          |
| USB20CV Chapter 9                    | passed   |
| USB30CV Chapter 9                    | passed   |
| USBCV MSC                            | passed   |
|                                      |          |
| DEVICE POWER MEASUREMENTS            |          |
| Power Measurements                   | passed   |
|                                      |          |
| DEVICE GOLDEN TREE                   |          |
| Interoperability                     | passed   |
|                                      |          |
| EMBEDDED HOST INTEROPERABILITY       |          |
| Functionality with TPL               | passed   |

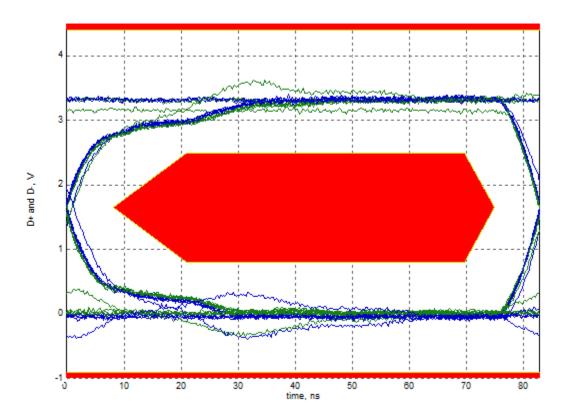

## 4. RESULTS

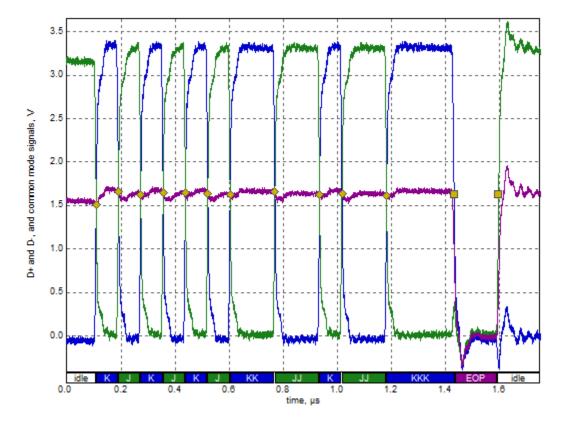

## 4.1. ELECTRICAL LEGACY

## 4.1.1. UPSTREAM FULL SPEED SIGNAL QUALITY

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the Full Speed Upstream Signal Quality test.

Signal Eye

Date and Common Mode Voltage

- eye passes
- EOP width: 166.20 ns EOP width passes
- Measured signaling rate: 11.9993 MHz
  - signal rate passes
- Edge Monotonicity: 28 mV Monotonic Edge passes
- Crossover voltage range: 1.51 V to 1.66 V, mean crossover 1.63 V (first crossover at 1.51 V, 10 other differential crossovers checked) crossover voltages pass
- Consecutive jitter range: -228.258 ps to 120.418 ps, RMS jitter 151.851 ps
- Paired JK jitter range: 16.196 ps to 18.917 ps, RMS jitter 17.610 ps
- Paired KJ jitter range: -53.849 ps to 22.646 ps, RMS jitter 31.246 ps jitter passes

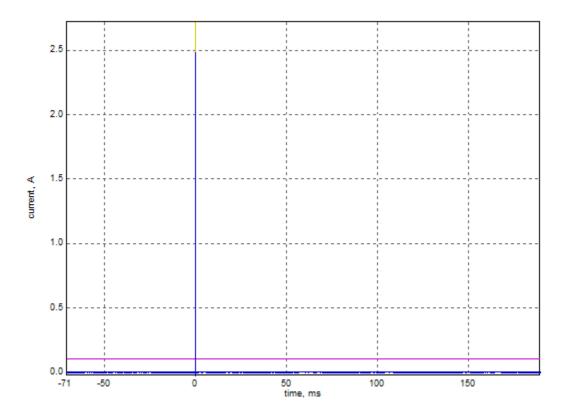

### Additional Information

- Rising Edge Rate: 245.47 V/us (Equivalent risetime = 10.75 ns) (minimum 132.00 V/us, maximum 660.00 V/us)
- Falling Edge Rate: 265.59 V/us (Equivalent falltime = 9.94 ns) (minimum 132.00 V/us, maximum 660.00 V/us)
- Edge Rate Match: 7.87% (limit +/-10%)

### 4.1.2. DEVICE INRUSH CURRENT

The measured Inrush current of the Freescale Semiconductors Inc. i.MX6 Solo Lite is 8.68  $\mu$ C. The USB spec allows up to 10 $\mu$ F to be hard started, which represents an allowed load of approximately 50  $\mu$ C. With a measured load of 8.68  $\mu$ C, the device passed the inrush current test.

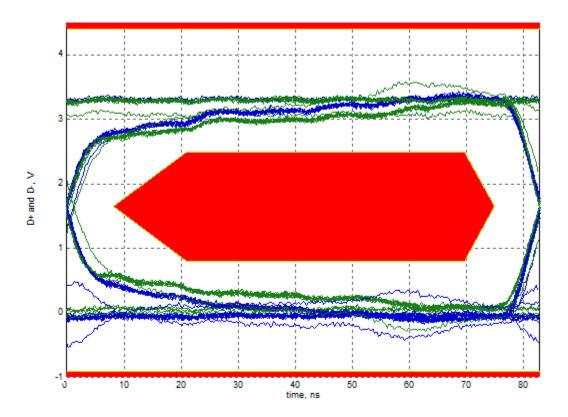

**Inrush Current** 

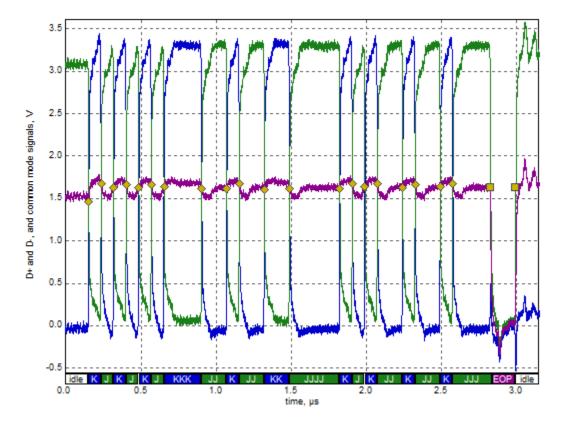

## 4.1.3. DOWNSTREAM FULL SPEED SIGNAL QUALITY

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the Full Speed Downstream Signal Quality test.

Signal Eye

Date and Common Mode Voltage

- eye passes
- EOP width: 166.70 ns EOP width passes
- Measured signaling rate: 11.9983 MHz
  - signal rate passes
- Edge Monotonicity: 4 mV Monotonic Edge passes
- Crossover voltage range: 1.47 V to 1.68 V, mean crossover 1.63 V (first crossover at 1.47 V, 19 other differential crossovers checked) crossover voltages pass
- Consecutive jitter range: -267.110 ps to 236.798 ps, RMS jitter 132.651 ps
- Paired JK jitter range: -190.093 ps to 239.146 ps, RMS jitter 136.636 ps
- Paired KJ jitter range: -279.399 ps to 321.131 ps, RMS jitter 192.366 ps jitter passes

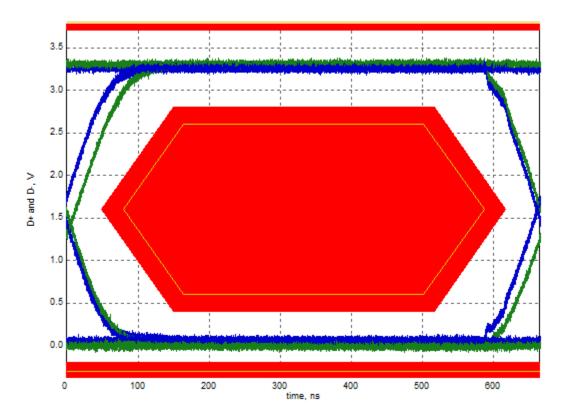

## **Additional Information**

- Rising Edge Rate: 274.41 V/us (Equivalent risetime = 9.62 ns) (minimum 132.00 V/us, maximum 660.00 V/us)
- Falling Edge Rate: 158.12 V/us (Equivalent falltime = 16.70 ns) (minimum 132.00 V/us, maximum 660.00 V/us)
- Edge Rate Match: 53.77% (limit +/-10%)

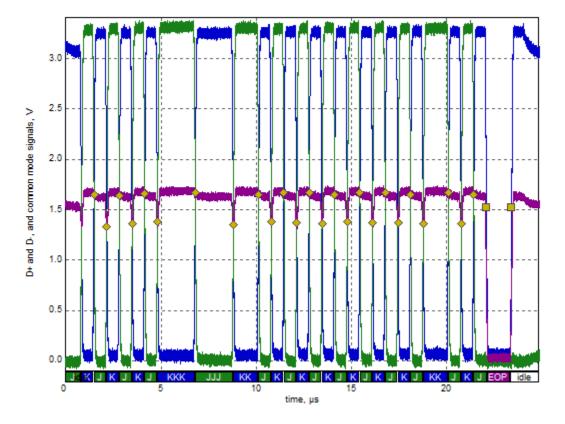

## 4.1.4. DOWNSTREAM LOW SPEED SIGNAL QUALITY

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the Low Speed Downstream Signal Quality test.

Signal Eye

Date and Common Mode Voltage

eye passes

EOP width: 1.33 us
 EOP width passes

Measured signaling rate: 1.4998 MHz

signal rate passes

 Edge Monotonicity: 93 mV Monotonic Edge passes

- Crossover voltage range: 1.34 V to 1.67 V, mean crossover 1.52 V (first crossover at 1.65 V, 24 other differential crossovers checked) crossover voltages pass
- Consecutive jitter range: -3.873 ns to 3.846 ns, RMS jitter 3.113 ns
- Paired JK jitter range: -0.489 ns to 1.230 ns, RMS jitter 0.572 ns
- Paired KJ jitter range: -0.698 ns to 0.906 ns, RMS jitter 0.508 ns jitter passes

### Additional Information

- Rising Edge Rate: 23.26 V/us (Equivalent risetime = 113.48 ns) (minimum 8.80 V/us, maximum 35.20 V/us)
- Falling Edge Rate: 13.17 V/us (Equivalent falltime = 200.45 ns) (minimum 8.80 V/us, maximum 35.20 V/us)
- Edge Rate Match: 55.40% (limit +/-20%)

#### 4.1.5. HOST DROP TEST

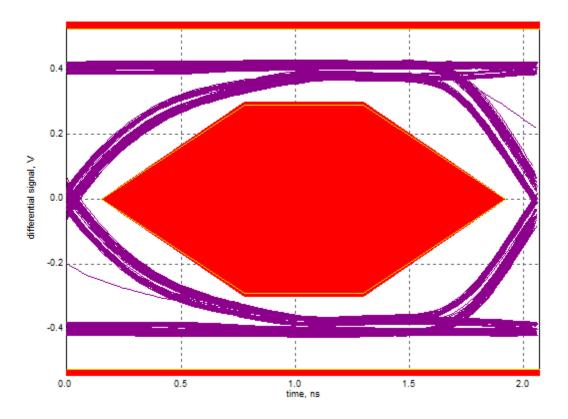

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the Drop test.

| Load       | Vbus (V) |
|------------|----------|
| No Load    | 5.19     |
| 500mA Load | 5.05     |

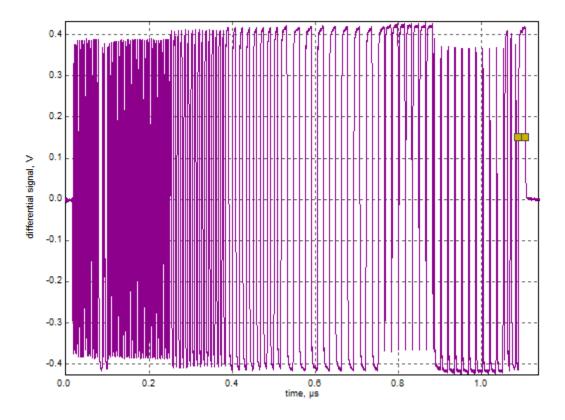

## 4.2. ELECTRICAL HIGH SPEED

## 4.2.1. UPSTREAM HIGH SPEED SIGNAL QUALITY

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the High Speed Upstream Signal Quality test.

High Speed Signal Eye

### Date and Common Mode Voltage

 $EL_2$  USB 2.0 High-Speed transmitter data rate must be 480 Mb/s +-0.05%

Data rate: 479.9677 MHz

Data rate: passed

EL\_4 USB 2.0 upstream facing port on a device without a captive cable must meet Template 1 transform waveform requirements measured at TP3 passed

 $EL_6$  USB 2.0 HS Driver must have 10 to 90% differential rise and fall times of greater than 500 ps. passed

EL\_7 USB 2.0 HS Driver must have monotonic data transitions over the vertical openings specified in the appropriate eye pattern template. passed

#### 4.2.2. DEVICE PACKET PARAMETERS

EL\_21 The SYNC field for all transmitted packets (not repeated packets) must begin with a 32-bit SYNC field. Data Packets SYNC field: 64.62 ns passed

EL\_22 When transmitting after receiving a packet, hosts and devices must provide an inter-packet gap of at least 8 bit times and no more than 192 bit times.

Inter-packet gap: 331.68 ns Inter-packet gap: 330.74 ns

passed

EL\_25 The EOP for all transmitted packets (except SOFs) must be an 8-bit NRZ byte of 011111111 without bit

stuffing.

NRZ byte: 17.06 ns

passed

#### 4.2.3. DEVICE CHIRP TIMING

EL\_28 Devices must transmit a chirp handshake no sooner than 2.5μs and no later than 6ms when being reset from suspend or full-speed state.

Chirp handshake: 1504 µs

passed

EL\_29 The chirp handshake generated by a device must be at least 1ms and not more than 7ms in duration.

Chirp handshake: 2.00 ms

passed

EL\_31 During device speed detection, when a device detects a valid chirp K-J-K-J sequence, the device must disconnect its 1.5K pull-up resistor and enable its high speed terminations within 500 $\mu$ s. Disconnect time pull-up resistor: 3.71  $\mu$ s

passed

#### 4.2.4. DEVICE SUSPEND/RESET/RESUME

EL\_38 A device must revert to full-speed termination no later than  $125\mu s$  after there is a 3ms idle period on the bus.

Full-speed revert time: 3.003 ms

passed

EL\_39 A device must support the suspend state.

EL\_40 If a device is in the suspend state and was operating in high-speed before being suspended, then the device must transition back to high speed operation within two bit times from the end of resume time signaling Note: It is not feasible to measure the device transition back to high-speed operation within two bit time from the end of the resume signaling. The presence of SOF at nominal 400mV amplitude following the resume signaling is sufficient for this test.

passed

EL\_27 Devices must transmit a chirp handshake no sooner than 3.1ms and no later than 6ms when being reset from a non-suspended high-speed mode. The timing is measured from the beginning of the last SOF transmitted before the reset begins.

Chirp handshake: 3.50 ms

passed

EL\_28 Devices must transmit a chirp handshake no sooner than 2.5μs and no later than 6ms when being reset from suspend or a full-speed state.

Chirp handshake: 1504 µs

passed

### 4.2.5. DEVICE TEST J/K, SEO\_NAK

EL\_8 When either D+ or D- are driven high, the output voltage must be 400mV +-10% when terminated with precision 450 Ohm resistors to the ground

| Test | D+ Voltage (mV) | D- Voltage (mV) |
|------|-----------------|-----------------|
| J    | 433             | 5               |
| K    | 5               | 437             |

passed

EL\_9 When either D+ or D- are not being driven, the output voltage must be 0V +-10mV when terminated with precision 450 Ohm resistors to the ground.

| Test | Voltage (mV) |
|------|--------------|
| D+   | 0            |
| D-   | 0            |

#### 4.2.6. DEVICE RECEIVER SENSITIVITY

EL\_18 A high-speed capable device's Transmission Envelope Detector must be fast enough to allow the HS receiver to detect data transmission, active DLL lock, and detect the end of the SYNC field within 12 bit times. passed

EL\_17 A high-speed capable device must implement a transmission envelope detector that does not indicate squelch (i.e. reliably receives packets) when a receiver exceeds 150mV differential amplitude.

Note: A waiver may be granted if the receiver indicates Squelch at +-50mV of 100mV differential amplitude. This is to compensate for the oscilloscope probe point away from the receiver pins.

Squelch:

155 mV

-121 mV

passed

EL\_16 A high-speed capable device must implement a transmission envelope detector that indicates squelch (i.e. never receives packets) when a receiver's input falls below 100mV differential amplitude.

Note: A waiver may be granted if the receiver's input falls below 100mV differential amplitude. This is to compensate for the oscilloscope probe point away from the receiver pins.

Squelch:

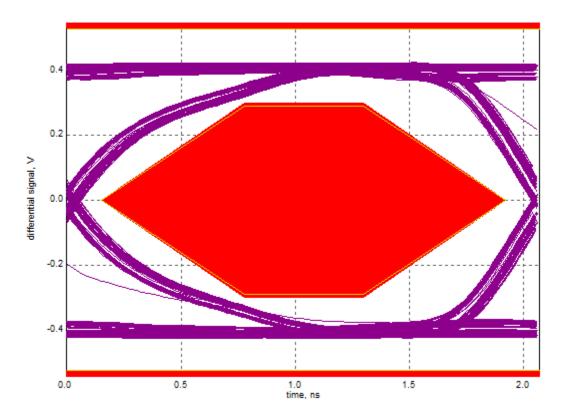

154 mV

-118 mV

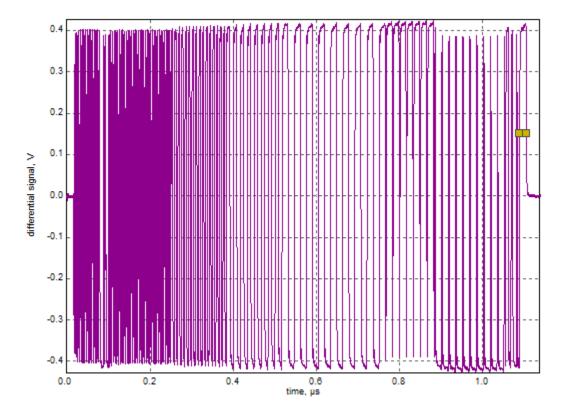

## 4.2.7. DOWNSTREAM HIGH SPEED SIGNAL QUALITY

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the High Speed Downstream Signal Quality test.

High Speed Signal Eye

Date and Common Mode Voltage

## **Required Tests**

• Overall result: pass!

 Signal eye: eye passes

• EOP width: 7.95 bits EOP width passes

Measured signaling rate: 479.9693 MHz signal rate passes

 Edge Monotonicity: 0 mV Monotonic Edge passes

 Rising Edge Rate: 919.79 V/us (695.81 ps equivalent risetime) passes

• Falling Edge Rate: 926.75 V/us (690.59 ps equivalent falltime) passes

#### Additional Information

• Consecutive jitter range: -41.316 ps to 67.507 ps, RMS jitter 31.905 ps

Paired JK jitter range: -63.710 ps to 64.639 ps, RMS jitter 18.393 ps

• Paired KJ jitter range: -67.641 ps to 59.986 ps, RMS jitter 14.476 ps

EL\_2 USB 2.0 High-Speed transmitter data rate must be 480 Mb/s +-0.05%

Data rate: 479.9600 MHz

passed

EL\_3 USB 2.0 downstream facing port on a device without a captive cable must meet Template 1 transform waveform requirements measured at TP2 passed

EL\_6 USB 2.0 HS Driver must have 10 to 90% differential rise and fall times of greater than 500 ps. passed

EL\_7 USB 2.0 HS Driver must have monotonic data transitions over the vertical openings specified in the appropriate eye pattern template. passed

#### 4.2.8. HOST PACKET PARAMETERS

EL\_21 The SYNC field for all transmitted packets (not repeated packets) must begin with a 32-bit SYNC field. Since there is an internal hub it's allowed to truncate maximum 4 bits. SOF SYNC field and Data Packets SYNC both have 67.16 ns SYNC

passed

EL\_25 The EOP for all transmitted packets (except SOFs) must ben an 8-bit NRZ byte of 01111111 without bit stuffing. Since there is an internal hub it's allowed to add 4 random bits.

The EOP is 17 ns

passed

EL\_23 Host transmitting two packets in a row must have an inter-packet gap of at least 88 bit times and not more than 192 bit times.

Inter-packet gap internally of the host is: 369 ns

Passed

EL\_22 When transmitting after receiving a packet, hosts and devices must provide an inter-packet gap at least 8 bit times and not more than 192 bit times. Since there is an internal hub an additional delay is allowed with a maximum of 292 bit.

Inter-packet gap respond of a host packet is 360 ns passed

EL\_55 Host transmitting SOF packets must provide a 40-bit without bit stuffing where the first symbol of the EOP is a transition from the last data symbol. Since there is an internal hub it's allowed to add 4 random bits. SOF EOP: 83.70 ns

passed

#### 4.2.9. HOST CHIRP TIMING

EL\_33 Downstream port start sending and alternating sequence of Chirp K's and Chirp J's within  $100\mu s$  after the device Chirp K stops.

Measured value is 1.17  $\mu$ s passed

EL\_34 Downstream port Chirp K and Chirp J durations must be between 40 $\mu$ s and 60 $\mu$ s duration. Measured value is Chirp K 50.00  $\mu$ s - Chirp J 50.00  $\mu$ s passed

EL\_35 Downstream ports begin sending SOF's within 500 $\mu$ s and not sooner than 100 $\mu$ s from transmission of the last Chirp(J or K).

Measured value is: 360  $\mu s$ 

#### 4.2.10. HOST SUSPEND/RESET/RESUME TIMING

EL\_39 A device must support the Suspend state. passed

EL\_41 After resuming a port, the host must begin sending SOF's within 3ms of the start of the idle state. When repeating the test of the SOF's never exceed the 3ms

The SOFs never exceed the 3ms when performing the test several times.

Passed

### 4.2.11. HOST TEST J/K, SEO\_NAK

EL\_8 When either D+ or D- are driven high, the output voltage must be 400mV +-10% when terminated with precision 45 Ohm resistors to the ground

|   | D+ Voltage (mV) | D- Voltage (mV) |
|---|-----------------|-----------------|
| J | 427             | 5               |
| K | 5               | 431             |

passed

EL\_9 When either D+ or D- are not being driven, the output voltage must be 0V +-10mV when terminated with precision 45 Ohm resistors to the ground.

|    | Voltage (mV) |
|----|--------------|
| D+ | 0            |
| D- | 0            |

#### 4.3. DEVICE FRAMEWORK

The following tests were performed using the USB20CV & USB30CV test tool.

## 4.3.1. USB20CV CHAPTER 9

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the Chapter 9 test of USB20CV.

| Description | Full & High Speed |
|-------------|-------------------|
| Vendor ID   | 15a2              |
| Product ID  | 6c                |
| CFG's       | 1                 |
| Interfaces  | 1                 |
| USB Spec.   | 2.0               |
| Max. Power  | 2                 |
| Result      | passed            |

#### 4.3.2. USBCV MSC

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the USB20CV & USB30CV MSC test on Renesas and Fresco Logic xHCl.

### 4.3.3. USB30CV

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the USB30CV Chapter 9 test on Renesas and Fresco Logic xHCI.

### 4.4. POWER MEASUREMENTS DEVICE MODE

#### 4.4.1. WINDOWS 7 SP1 POWER MEASUREMENT

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the power measurement tests.

#### 4.4.1.1. FULL SPEED MODE

| Device State       | Measurement | Status |
|--------------------|-------------|--------|
| Unconfigured State | 0.54 mA     | passed |
| Configured State   | 0.54 mA     | passed |
| Operating State    | 0.54 mA     | passed |
| Suspended State    | 540.00 μΑ   | passed |

#### 4.4.1.2. HIGH SPEED MODE

| Device State       | Measurement | Status |
|--------------------|-------------|--------|
| Unconfigured State | 0.54 mA     | passed |
| Configured State   | 0.54 mA     | passed |
| Operating State    | 0.54 mA     | passed |
| Suspended State    | 540.00 μΑ   | passed |

### 4.5. BACK VOLTAGE

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the back voltage tests.

|      | DC Voltage Before Enumeration | DC Voltage After Enumeration and |  |
|------|-------------------------------|----------------------------------|--|
|      |                               | Removal                          |  |
| Vbus | 16 mV                         | 16 mV                            |  |
| D+   | 0 mV                          | 0 mV                             |  |
| D-   | 0 mV                          | 0 mV                             |  |

## 4.6. GOLD TREE (INTEROPERABILITY)

For more information about the test guides used by Testronic Labs Belgium n.v., please see the procedure that can be found at http://compliance.usb.org.

### 4.6.1. WINDOWS 7 SP1 INTEROPERABILITY

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the interoperability tests.

| Test No. | Test description   | Result |
|----------|--|--------|
| 1        | Enumeration and driver installation test on EHCI                 | passed |
| 2        | Remove External Power Supply                                     | passed |
| 3        | DUT demonstrates correct using default drivers                   | passed |
| 4        | Update driver  | n.a    |
| 5        | Install Software   | n.a    |
| 6        | Demonstrates functionality with update driver and/or application | passed |
| 7        | Interoperability (operates all the devices in Gold Tree)         | passed |
| 8        | Hot Detach & Reattach  | passed |
| 9        | Warm boot  | passed |
| 10       | Inactive S1 Suspend (Remote wake-up test)                        | passed |
| 11       | Inactive S1 Resume (Remote wake-up test)                         | passed |
| 12       | Active S3 Suspend  | passed |
| 13       | Active S3 Resume   | passed |
| 14       | UHCI Root port test  | passed |
| 15       | Active S4 Suspend(Hibernate)                                     | passed |
| 16       | Active S4 Resume(Hibernate)                                      | passed |
| 17       | Topology change UHCI   | passed |
| 18       | Topology change OHCI   | passed |
| 19       | Topology change XHCI   | passed |

#### 4.7. A-UUT INTEROPERABILITY

The Freescale Semiconductors Inc. i.MX6 Solo Lite passed the manual testing part (Chapter 7) of the USB On-The-Go and Embedded Host Automated Compliance Plan for the On-The-Go & Embedded Host Supplement Revision 2.0.

| Test No. | Test Description                                      | Result |
|----------|---|--------|
| 7.3.1    | Functionality B-device (specific TPL device(s))       | passed |
| 7.3.2    | Category Functionality B-device Device 1              | passed |
|          | Device 2 (composite)                                  | passed |
| 7.3.3    | Boot test   | passed |
| 7.3.4    | Legacy Speed Test                                     | passed |
| 7.3.5    | Concurrent and Independently test                     | passed |
| 7.3.6    | A-UUT Unsupported device message Test                 | passed |
|          | Low Speed Device                                      | passed |
|          | Full Speed Device                                     | passed |
|          | High Speed Device                                     | passed |
|          | Super Speed Device                                    | passed |
|          | Composite Device                                      | passed |
| 7.3.7    | A-UUT Hub Error Message test                          | passed |
|          | Device behind Hub not enumerated                      | passed |
| 7.3.8    | A-UUT Hub functionality test                          | passed |
|          | High Speed Device                                     | passed |
|          | Full Speed Device                                     | passed |
| 7.3.9    | A-UUT Hub maximum tier test                           | passed |
| 7.3.10   | A-UUT Hub concurrent and independent test             | passed |
| 7.3.11   | A-UUT Bus powered hub power exceeded test             | passed |
| 7.3.12   | A-UUT Maximum concurrently device exceed message test | passed |
| 7.3.13   | A-UUT Suspend/Resume test                             | n.a.   |
| 7.3.14   | A-UUT Suspend Disconnect test                         | n.a    |
| 7.3.15   | A-UUT Suspend Attach test                             | n.a.   |
| 7.3.16   | A-UUT Suspend Topology Change test                    | n.a    |
| 7.3.17   | A-UUT Suspend Remote Wakeup test                      | n.a.   |
| 7.3.18   | OTH to OTG Test                                       | n.a    |

#### 5. OTHER TESTRONIC LABS SERVICES

Testronic Labs, Your hardware test centre.

Testronic Labs operates as an independent Belgian based test centre for the validation and release of multimedia peripheral equipment and interfaces.

Testronic Labs offers a wide range of testing activities and has become a professional test center for numerous companies all over the world, a test house known for its quality of testing and its dynamic approach.

Thanks to the independence of the test laboraties, Testronic Labs is ideally placed to offer an objective, third party opinion on overall quality of the products in development.

 $\label{lem:currently} \textbf{Currently, Testronic Labs experience is located in the following application areas:}$ 

#### Services:

- Alpha Testing
- Beta Testing
- Pre-WHQL Testing
- Compatibility Testing
- Functionality Testing
- Localisation Testing
- Spec Compliance
- Consultancy

#### Technologies:

- Optical Storage Drives
- Firewire IEEE1394 Certification
- PC, MAC systems and peripherals
- USB
- USB On-The-Go
- Serial-ATA
- Ethernet
- DLNA
- DVB
- PCI-Express
- HDMI, DVI
- Bluetooth
- WIFI
- ...

#### Tools:

- Ch8ck tool
- Traffic Lab

Please visit our web site at http://www.testroniclabs.com for detailed information regarding Testronic Labs testing services.
