GENERAL DESIGN NOTES

- Unless Otherwise Specified:
All resistors are in ohms, 5%, 1/16 Watt
All capacitors are in uF, 20%, 50V
All voltages are DC
All polarized capacitors are Tantalum
- Critical components that require tolerances tighter than listed in Note 1 are labeled with required tolerance on schematic. Non-critical components may be filled with tighter tolerance parts for BOM consolidation purposes, but may be changed to meet the general tolerances of Note 1 if desired.
- Interrupted lines coded with the same letter or letter combinations are electrically connected.
- Device type number is for reference only. The number varies with the manufacturer.
- Special signal usage:
_B or 'n' Denotes - Active-Low Signal
<- or] Denotes - Vectored Signals
- Interpret diagram in accordance with American National Standards Institute specifications, current revision, with the exception of logic block symbology.

AC ADAPTER SPECIFICATIONS

DC Voltage Output: 5VDC
Current Output: ~5A (depending on application)
Polarity: 
Inner Diameter: 2.1mm
Outer Diameter: 5.5mm

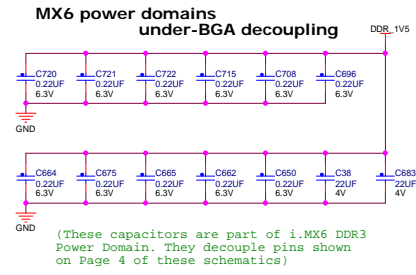

Revision History

Rev. Code	Date	Description
X1	11/02/2011	Rev X1 Draft
A	12/15/2011	Release to Prototype Phase
AX1	02/09/12	Draft Rev B Respin: - Changed Audio CODEC to WM8962 per Marketing Request. - Repopulated two digital microphones. Changed mics to Wolfson WM2730 per Marketing. - Connected NVCC_JTAG rail to GEN_3V3. - Added PFET Switch to SMBST supply to isolate it from System power. - Changed HDMI Media guard to CW2020 IC to correct I2C HDMI issue. - Changed voltage sides on U9 level shifter. - Changed SW4 to 3.15V output. Moved audio 1.8V to GEN_1V8. - Changed camera IVS supply to VGEN2, other IVS loads moved to VGEN1. - Added isolation PFETs to Audio voltage supplies. - Switched USB_OTG_ID to pin ENET_RX_ER, USBOTG_OC to pin EIM2 and USBH1_OC to pin EIM_D30 to match pinmux functionality. - Added parallel termination resistors to PCIe differential clock traces. - Added next generation DEVSLP option for SATA connection. - Moved DISPO_PWR_EN to NANDP_WP_B to correct pull up voltage issue. - Deleted auxiliary 3.15V voltage regulator. - Designated several capacitors on processor core power rails as DNP. Validation proved unnecessary. - Moved I2C3 SDA from GPIO_16. This pin must be unconnected for Ethernet 1588 (time stamp) functionality to work. - Added shield ground pins to LVDS connectors. - Changed external speaker capacitors to higher voltage rating. - Changed external regulator to supply 3.0V power to VSNVS. - Changed PF0100 microprocessor program circuit to DNP. - Added 5V supply to LCD expansion headers. - Connected HPOUTFB directly to Audio GND. - Connected VDDIOT to ground to boot PMIC from program settings. - Added isolation to prevent back powering board from USB when no battery present. - Back annotated Schematic to Layout. REFDES may have changed from Rev A. - Populated optional *PWRON* button circuit for use with Android. - Removed write protect on NOR Flash. - Removed LC filter circuit from external speakers. - Added an additional 2.100uF capacitors to MPCIE_3V3 next to connector. - Updated Power Rail, IOMUX, and Configuration Tables.
B	02/24/12	Release to Production - Depopulated following pull up/down resistors on VSNVS domain to reduce current requirements: R31, R108, R585 - Updated board per configuration table on Page 23
B2	05/04/12	Release to Production - Depopulated Q512 because of schematic error. - Cut trace to U12 pin 5 to prevent false USB plug in detects. - Added schematic page to detail applicable board TDAs that affect Rev B boards. - Populating CAN components U517 and U518 per Marketing Request. - Added resistor CX1 across pads for C56 to improve 24MHz clock stability. - Pull up resistors R629 and R639 have been changed to DNP. - Changed Marketing part number to MCIMX6Q-SDB - Changed R7 and R112 to DNP - Changed C540 to *POPULATED*
B3	05/25/12	- Changed DDR3 Memory to new 1.35V capable memory MT41K128M16JF. - Changed C540 to 1.0 uF per Wolfson recommendation. - Changed R183 and R189 to 2.37K pull ups to bring I2C rise time into specification.
B4	07/18/12	- Removed buffers U500 and U520 from digital microphone data outputs. - A note is added to show required hand wire modification. - The Battery Charge Done LED is disconnected and R522 is depopulated. - New parts RX2, CX1 and UX1 are added. Traces show required hand modifications. - Optional Power on Circuit has been disabled and U511 and R578 are now DNP. A new Diode DX1 has been added to allow EIM_D29 to sense a button press. - RESET button SW2 now connects to the PWRON pin of the PMIC. - Added 10K pull down resistor RX3 to SDCKE0 trace. - SIM Card Connector CON1 is now populated by default. - Changed resistors R174 and R176 and to depopulated by default. - LVDS0 EDID will not be connected to I2C2 channel unless needed.
B5	09/20/12	- Changed U1 to i.MX 6 T01.2 processor. - Changed C68 and C612 to DNP. - Populated C682 and C716 with 22uF capacitors.
C1	10/01/12	- All hand wire changes made in Revision B4 are now formally made in the netlist and the layout files. - Q512 is changed to populated. - Optional Start Up circuit has been modified. - PMIC Programming Micro-Processor is removed. - CX1 capacitor is changed to C504 - DX1 diode is changed to D4 - RX1 resistor changed to R216 - RX2 resistor changed to R19 - RX3 resistor changed to R635 - UX1 buffer changed to U507 - Add DNP input to U13 buffer for USB_OTG_PWR_EN. - Buffer now powered from GEN_3V3. - FA_ANA and VDD_FA signals now connected to ground. - Added resistor options to EIM_D47 trace to EPD connector. - Connected EIM_DA9 to EPDC connector J508 to supply SDCES if needed. - Optional LDO U9 is now depopulated. - Added Connector J13 to support BT from SDIO Card through DNP resistors. - Added GPIO control of Battery Charge Enable pins through DNP resistor. - Changed C594 to 0.22uF - Changed C31 to 47uF - Added C555 as second 22uF capacitor in parallel with C546. - Changed C561, C562, C586 and C596 to 0.47uF. - Added additional 47uF bulk capacitor C769 to SD2 socket VDD supply. - Added option to route HDMI DDC comms separate from I2C2 comms channel. - C597 populated to provide de-bounce to RESET circuit. - Depopulated C68, C612. Populated C682, C716 closer to pins. - Depopulated C39, C606, C607, C608, C609, C610, C673 and C661. - Added DNP R302 to provide alternate 5V supply path to USB_H1_VBUS. - Added DNP R632 to provide alternate gating of PMIC_5V source (tied to VDDSOC). - Added DNP L25 and L26 to provide alternate 2.8V supply path to camera modules. - Added test pads to I2C3 third data lanes to support testing with will 24-bit panels. - Changed capacitors C6 and C7 to Zero Ohm resistors per PCIe Spec. - Changed Battery Charge ICs U502 and U503 to MAX8903c version.
C2	11/09/12	- Moved Ferrite Beads L10 and L17 to pads for L25 and L26. - Camera Analog Voltage supply moved to VGEN3. - Added notes for 24MHz crystal and USB layout design. - Changed R17, R21, R25, R27, R68, R85, R582, and R660 to 1k resistors due to lead time availability issues.
C3	02/20/13	- Changed BT500 Battery Holder to new manufacturer due to parts availability. - Changed R17, R21, R25, R27, R68, R85, R582, and R660 to 0.5k resistors due to parts availability. - Changed R97 and R106 pull up resistors to 4.7 Ohm. - Changed R19 pull up resistor to 10K Ohm.
C4	04/02/13	- DNP BH1, BH2 Standoffs. - Changed U8 part number to Programmed part MMPF0100F02ES - Changed R17, R21, R25, R27, R68, R85, R582, and R660 to 1k resistors due to lead time availability issues.
C5	02/16/15	- Updated Manufacturing numbers for U8, U512, U519

NOTE:
Diode D10 is required to correct a problem on a small number of i.MX6 DualLite parts in which VDDSNVS does not come up when VDDHIGH_IN is applied. A similar problem was corrected on i.MX6Q T01.2 processors. The diode is left populated for similarity across the Smart Device family of boards.

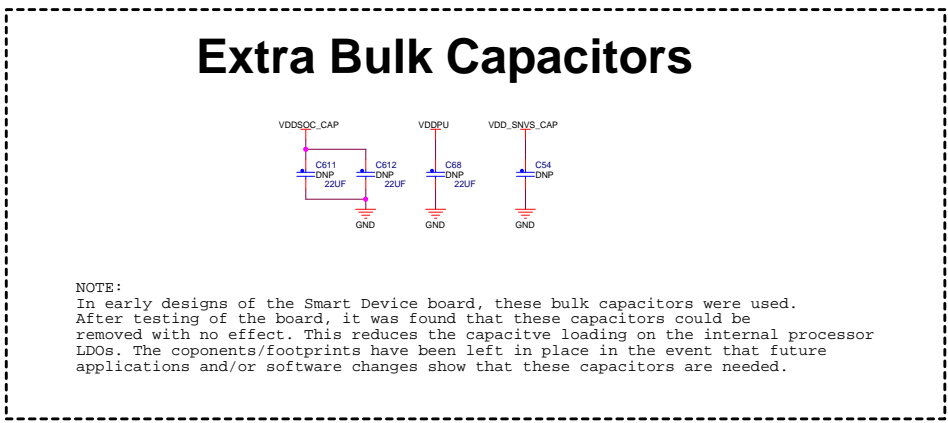

NOTE:
The VDDARM_CAP and VDDARM23_CAP rails have been optimized for use with the i.MX 6 Quad and i.MX 6 DualLite processors. To achieve the lowest power mode (preventing internal leakage) when using the i.MX 6 Dual and the i.MX 6 SoloLite processors, VDDARM_CAP should be split from VDDARM23_CAP and the VDDARM23_CAP pins should be connected to ground. This can be done on a single board configured for use with all four processors by placing a Zero Ohm resistor between the VDDARM_CAP and VDDARM23_CAP rails (in place of the straight net connection). To use the board with different processors, populate the resistor when using Quad and DualLite processors and depopulate resistor when using Dual and SoloLite processors. When using Dual and SoloLite processors, depopulate the capacitors attached to VDDARM23_CAP pins and replace one of the capacitors with a zero Ohm resistor to short pins to ground. The configuration in this schematic will work with all four processors, but will not result in the most power optimized configuration for the i.MX 6 Dual and Solo processors.

LAYOUT NOTE:
It is critical that the bulk and decoupling capacitors placed on the VDDARM_CAP, VDDARM23_CAP, VDDSOC_CAP and VDDPU rails be placed directly underneath the processors. Development testing has shown that proper placement of the capacitors can reduce ripple on the voltage rails by as much as 50% compared to placing capacitors outside the physical boundaries of the processor. These will result in more stable processor operations.

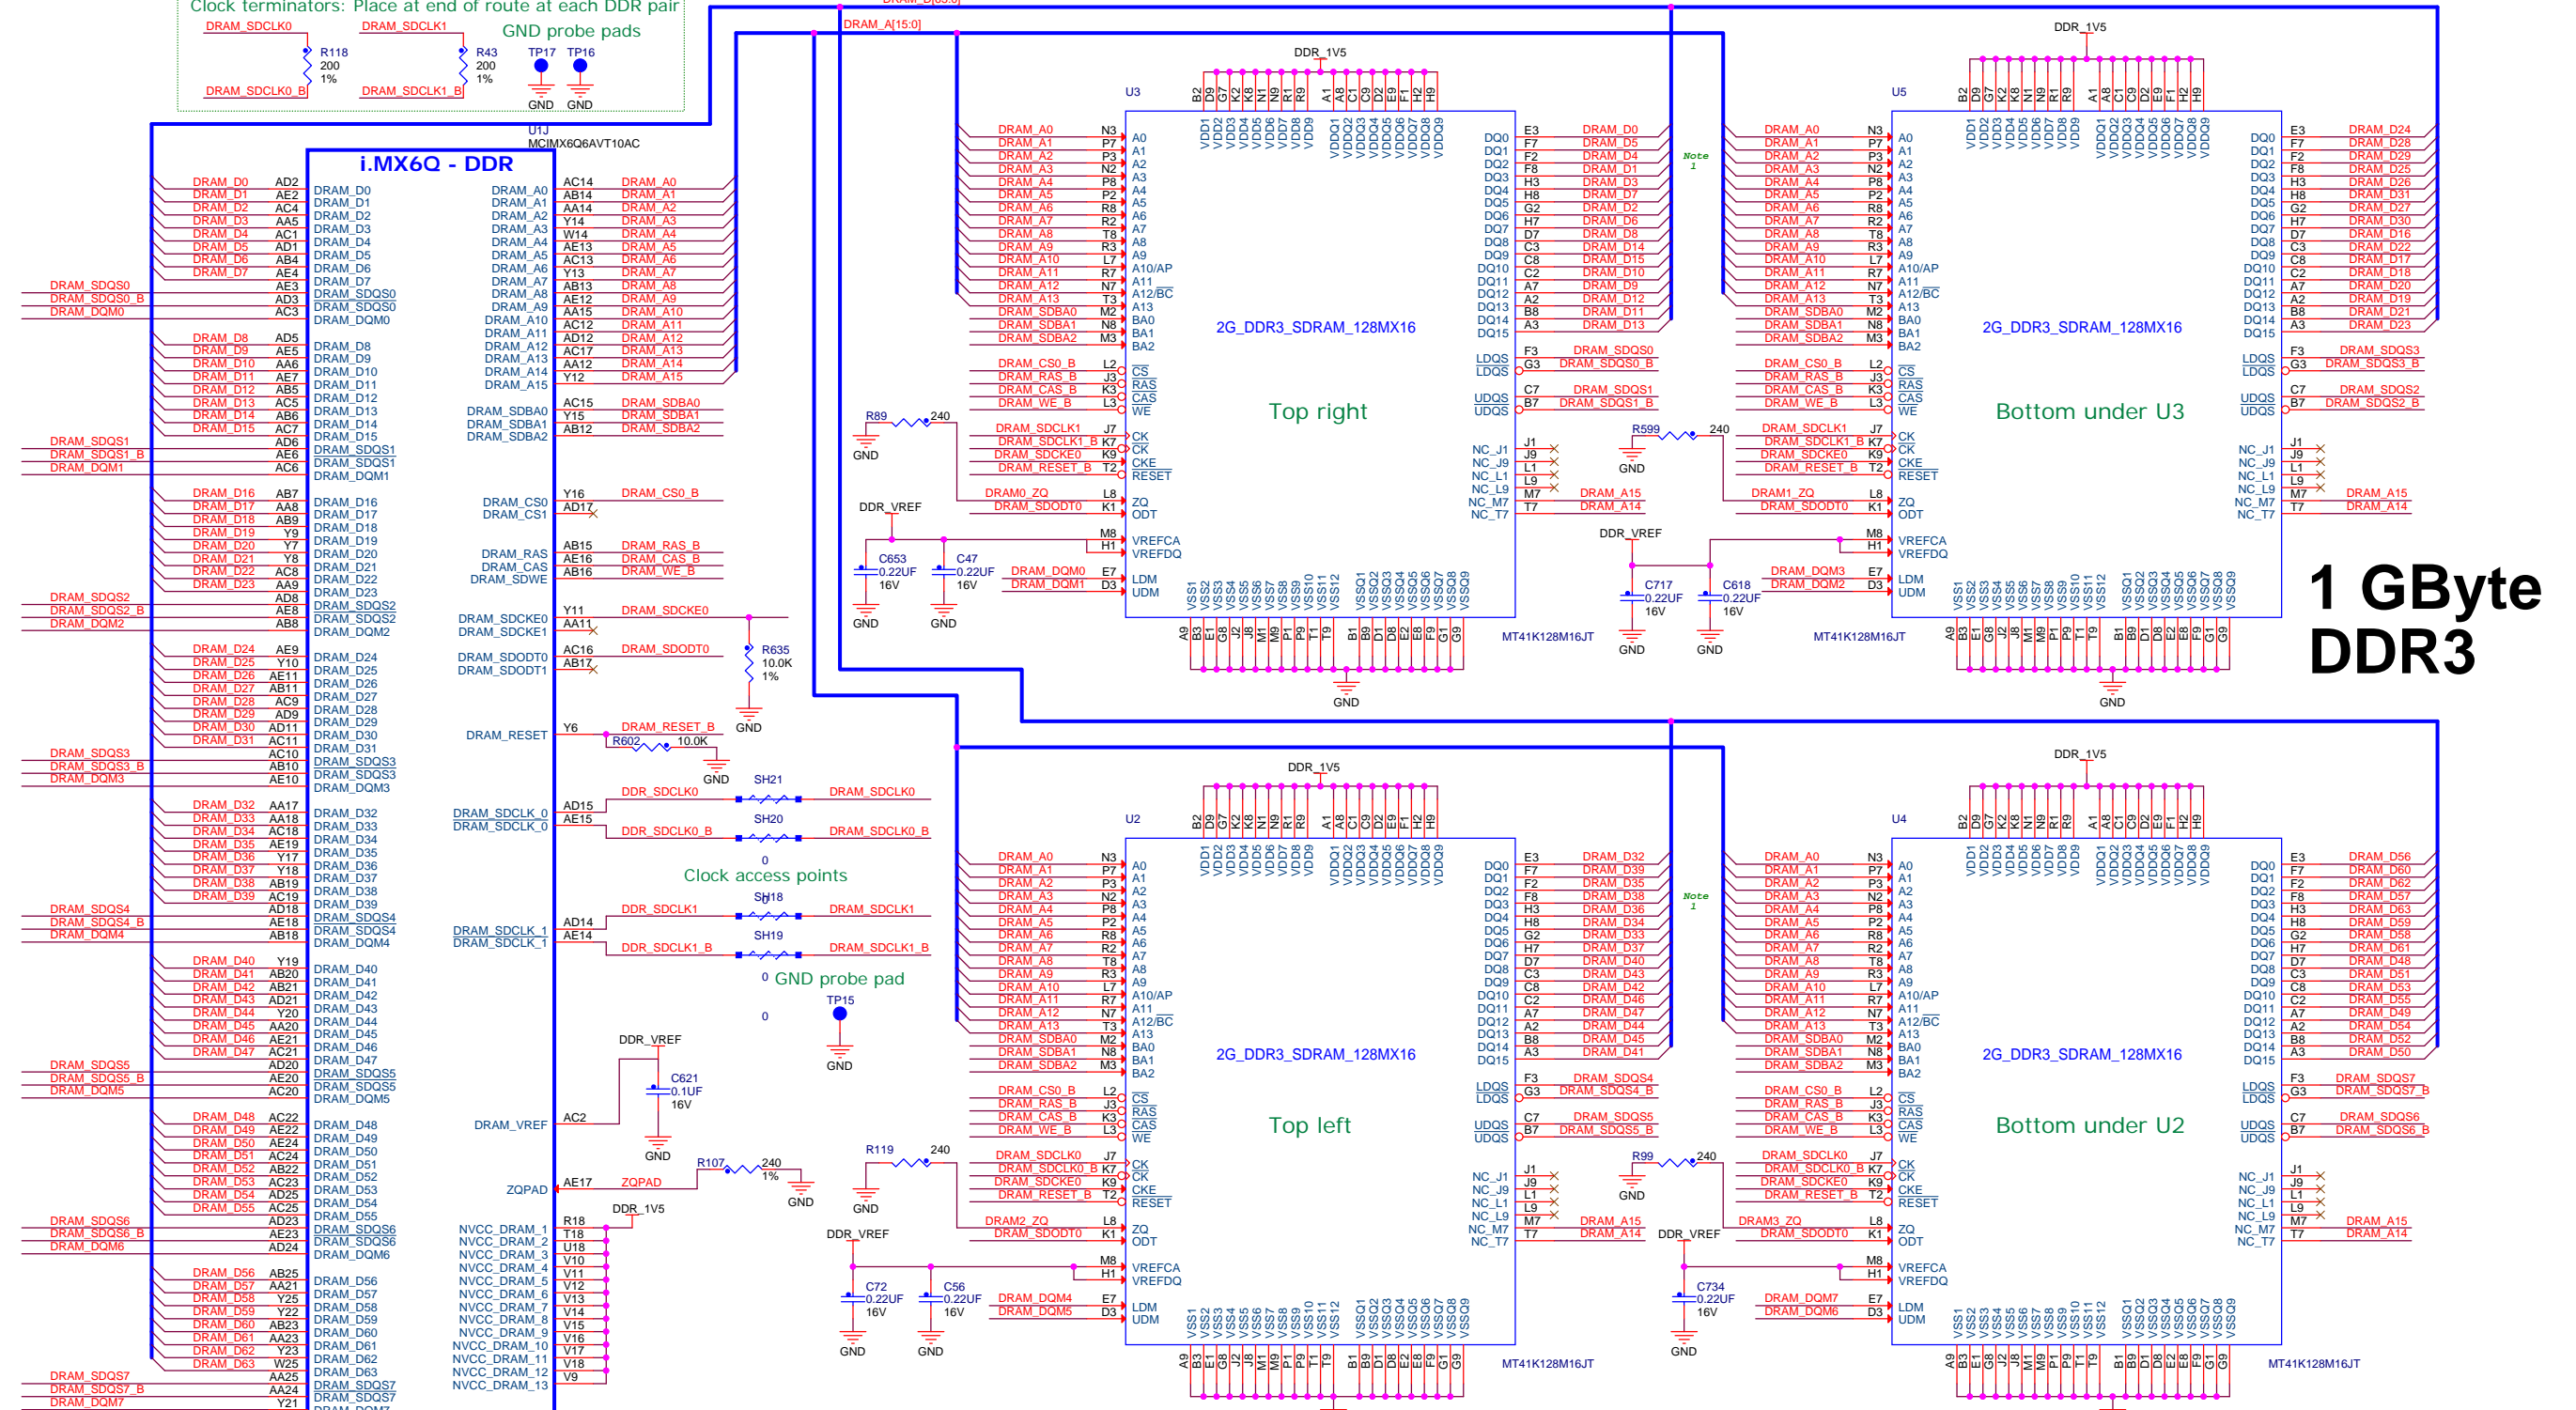

NOTE:
Freescale has validated two difference sets of decoupling capacitors and board layouts for use with the i.MX 6 processor. The customer is free to choose the desired decoupling scheme. This scheme uses fewer components. The alternate scheme can be found on the ARD board. Refer to SCH-27142 and LAY-27142.

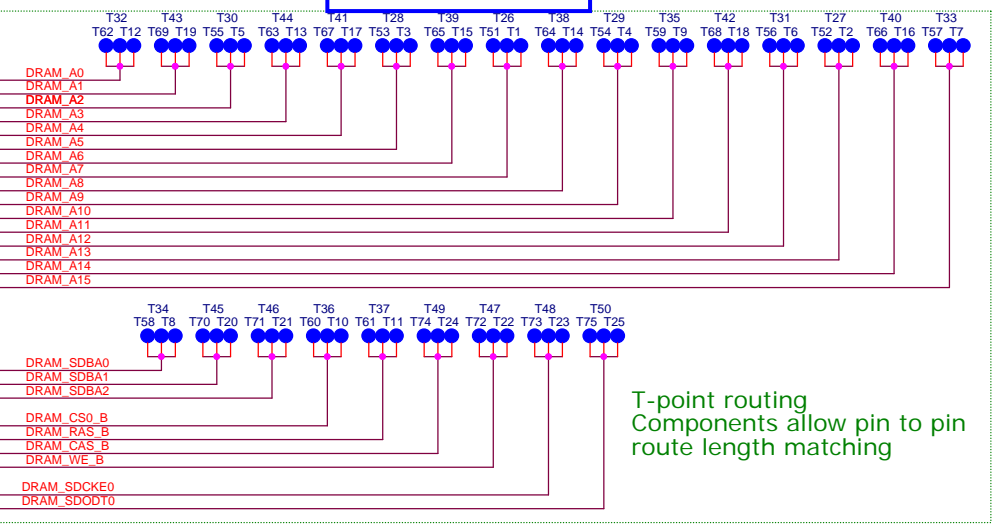

NOTE:
In early designs of the Smart Device board, these bulk capacitors were used. After testing of the board, it was found that these capacitors could be removed with no effect. This reduces the capacitive loading on the internal processor LDOs. The components/footprints have been left in place in the event that future applications and/or software changes show that these capacitors are needed.

Clock terminators: Place at end of route at each DDR pair

1 GByte
DDR3

T-point routing
Components allow pin to pin
route length matching

NOTE 1:
Using bit swapping for DATA bus to allow easy pcb routing.
When using data bit swapping the low order bit of each byte must reside at bit 0 of the byte. The remaining 7 data bits can be swapped freely. This restriction is for write leveling calibration.
Example D0 to D0 or D0 to D8, and D1-7 can be swapped.
When swapping byte lanes on 16-bit memories, remember to move the DQmX, DQSx, and DQSx_B signals for that byte lane.

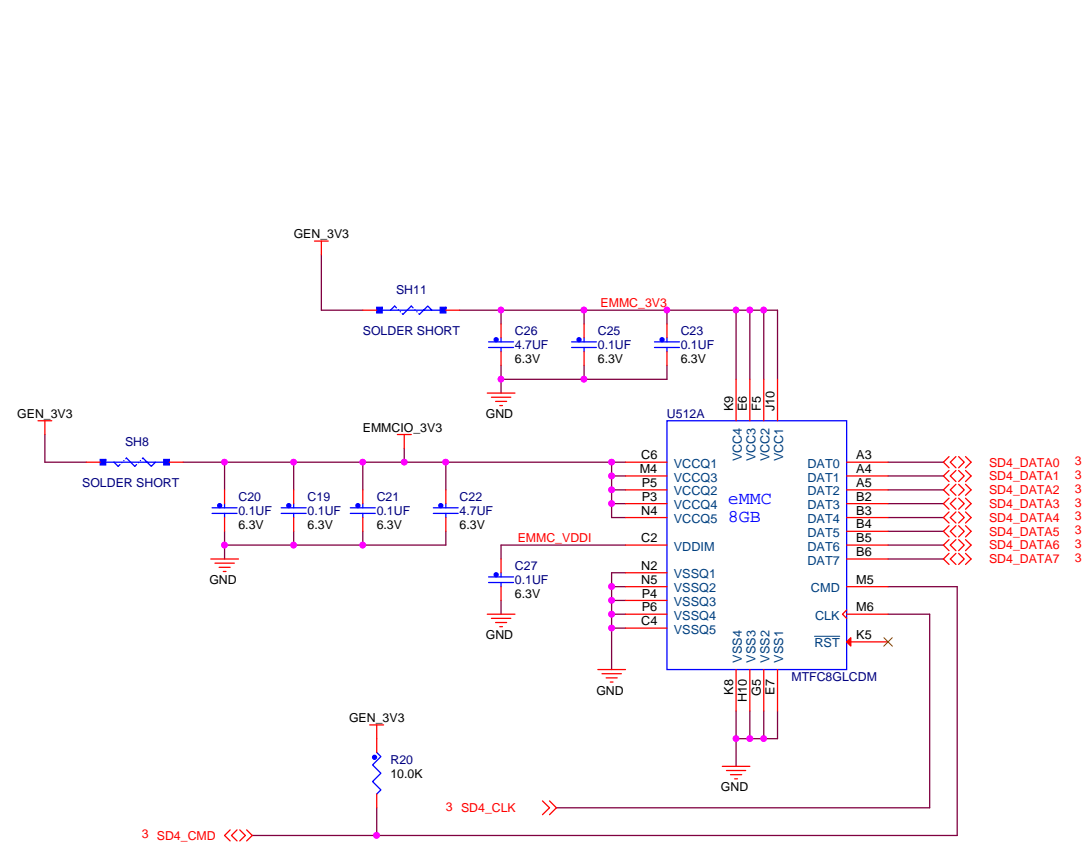

NOTE 2:
Pull down resistor RX3 is added to trace SDCKE0 in Rev B4 by soldering to an existing open via. Change will be made permanent in layout with the Rev C board.

freescale

ICAP Classification: FCP: FIUC: PUBI: X
Drawing Title: **MCIMX6Q-SMART DEVICE BOARD**

8GB eMMC MEMORY

4MB SPI NOR FLASH

Layout:
50ohm, SD singals(SD_DATAx, SD_CMD, SD_CLK) control.

NOTE:
RST_B pin is not enabled by default. It must be turned on by software. Therefore, part with RST_B pin can be used in existing designs that do not connect this pin.

SD CARD SOCKET

Layout:
50ohm, SD signals(SD_DATAx, SD_CMD, SD_CLK) length equal

SATA CONNECTOR

NOTE:
The new SATA specification retires the 3V3 pins as they were not being used by regular sized SATA devices. Pin 3 was repurposed to a device sleep functionality available in next generation SATA devices. Latest specification also recommends tying Pins 1 and 2 together, but leave floating.

Layout:
1. 100ohm diff pairs, length equal
2. Mount these capacitors very close to the connector J506.

hard drive standoff

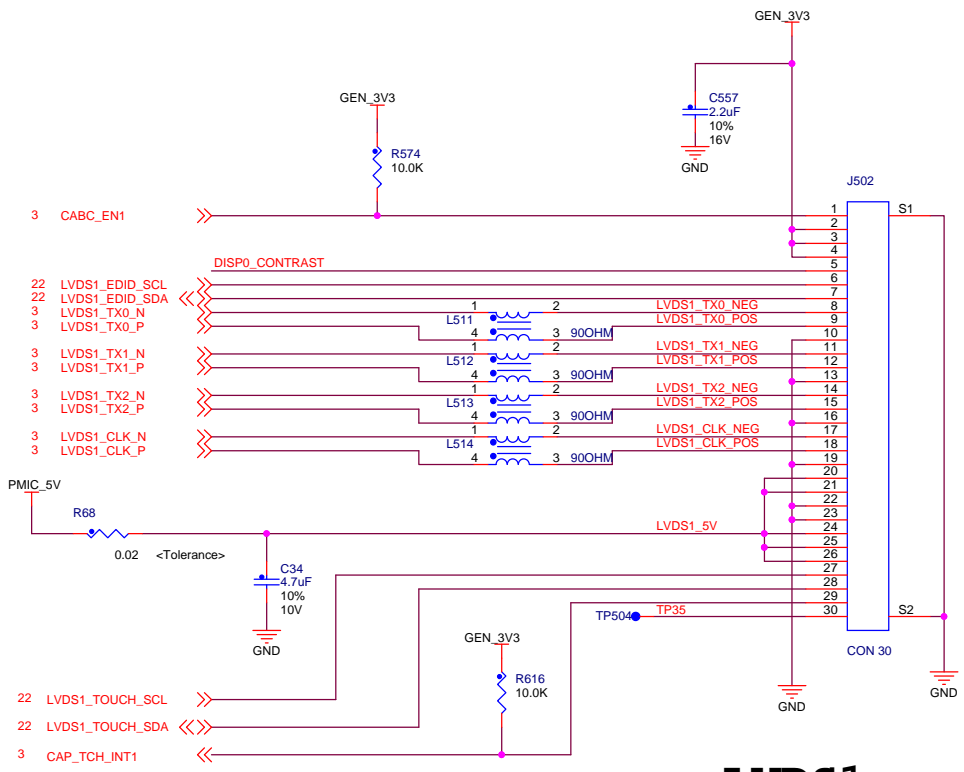

LVDS

LVDS0

Place L515, L516, L517 and L518 CMCs close to J403 connector.

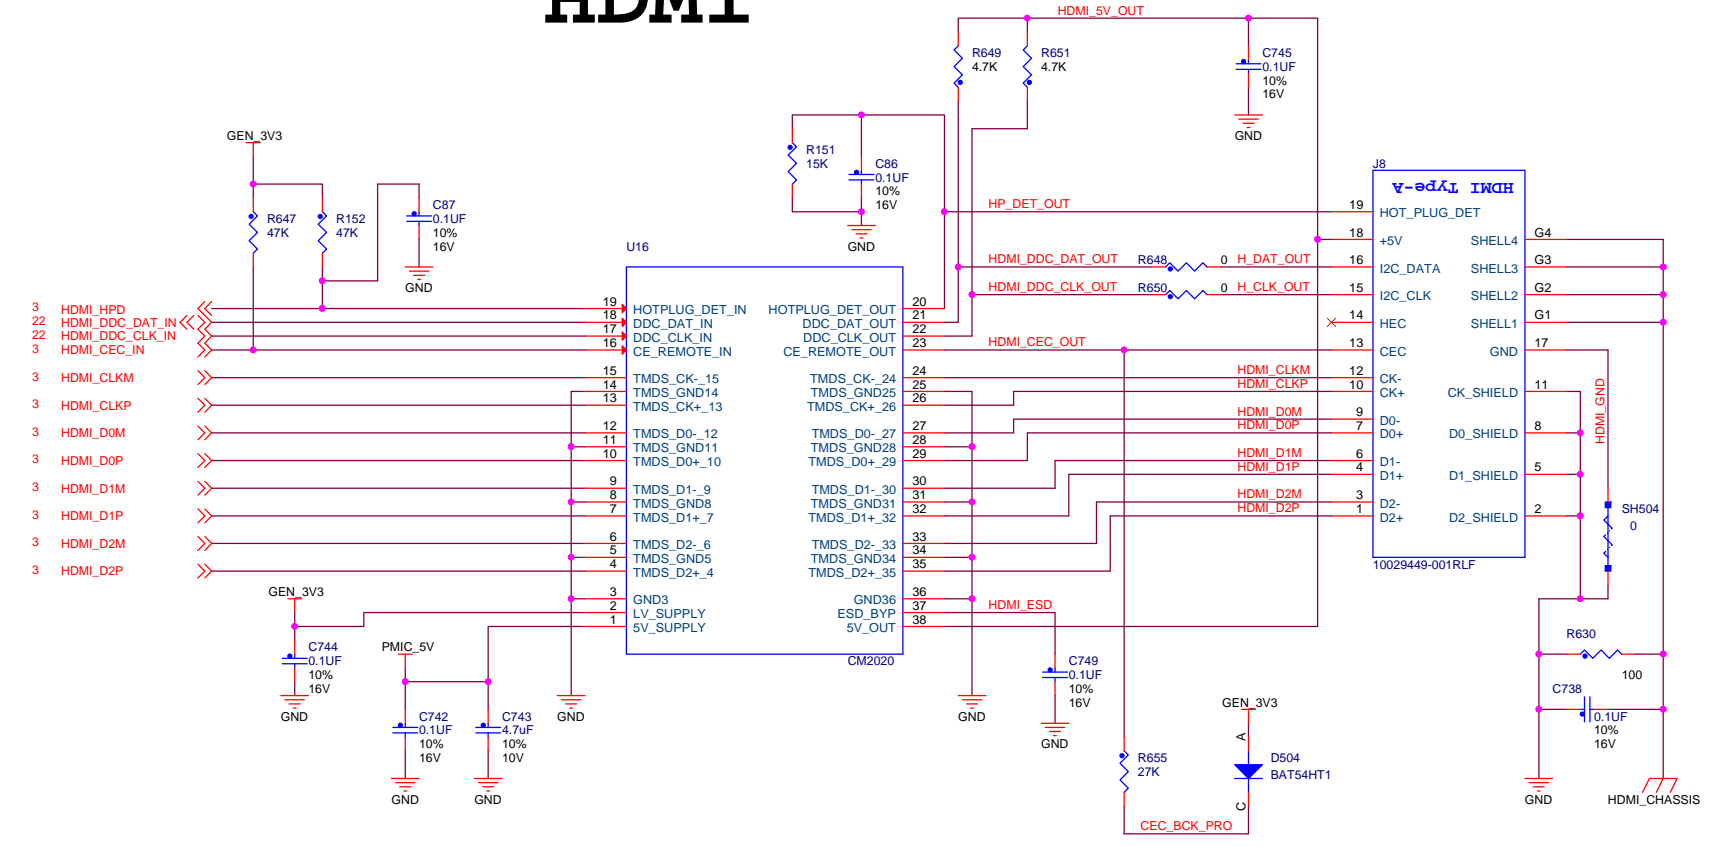

LVDS1

Layout: LVDS 100 ohm differential pairs

Place L511, L512, L513 and L514 CMCs close to J402 connector.

HDMI

Layout: HDMI 100 ohm differential pairs

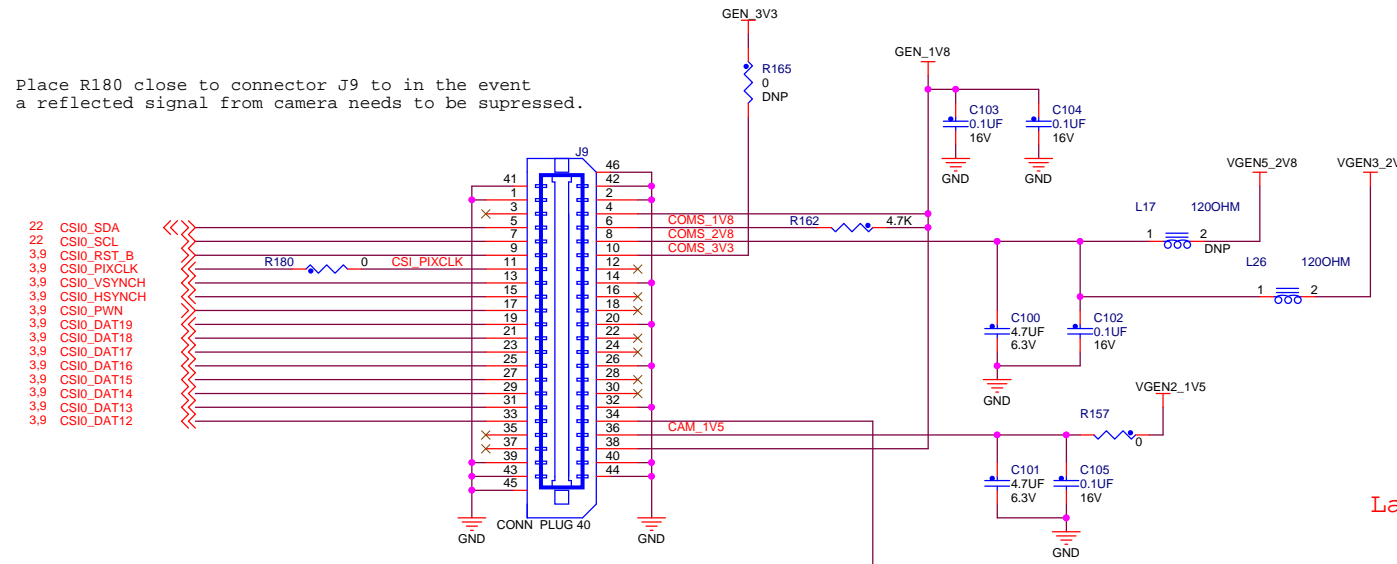

NOTE:
When using HDMI, I2C2 bus is limited to 100 kHz to read EDID values due to HDMI standards. I2C2 bus speed should be limited to 100 kHz whenever Hot Plug Detect is high.

LVDS Connector notes:
Pin 1: This pin is the Display Enable pin. It is used to Enable/Disable the HannStar display.
Pin 5: This pin is the Display Brightness control. It provides a PWM signal to the display to increase/decrease display brightness depending on PWM duty cycle. This signal is shared by all displays, so all displays will change brightness together.

CSI CMOS Sensor OV5642 5M Pixel

Place R180 close to connector J9 to in the event a reflected signal from camera needs to be suppressed.

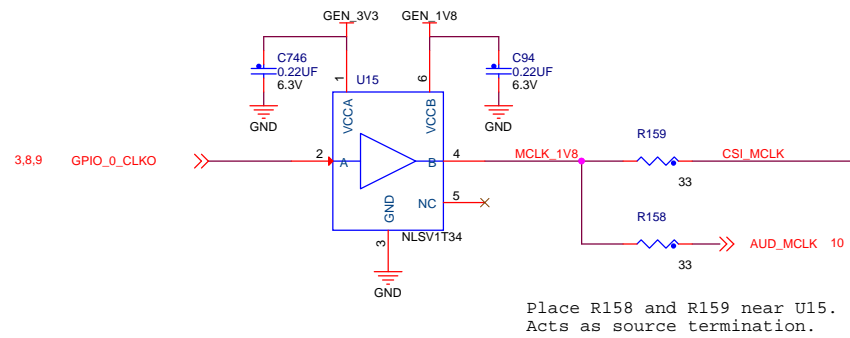

MIPI DISPLAY EXP PORT

Layout: 100 ohm differential pairs

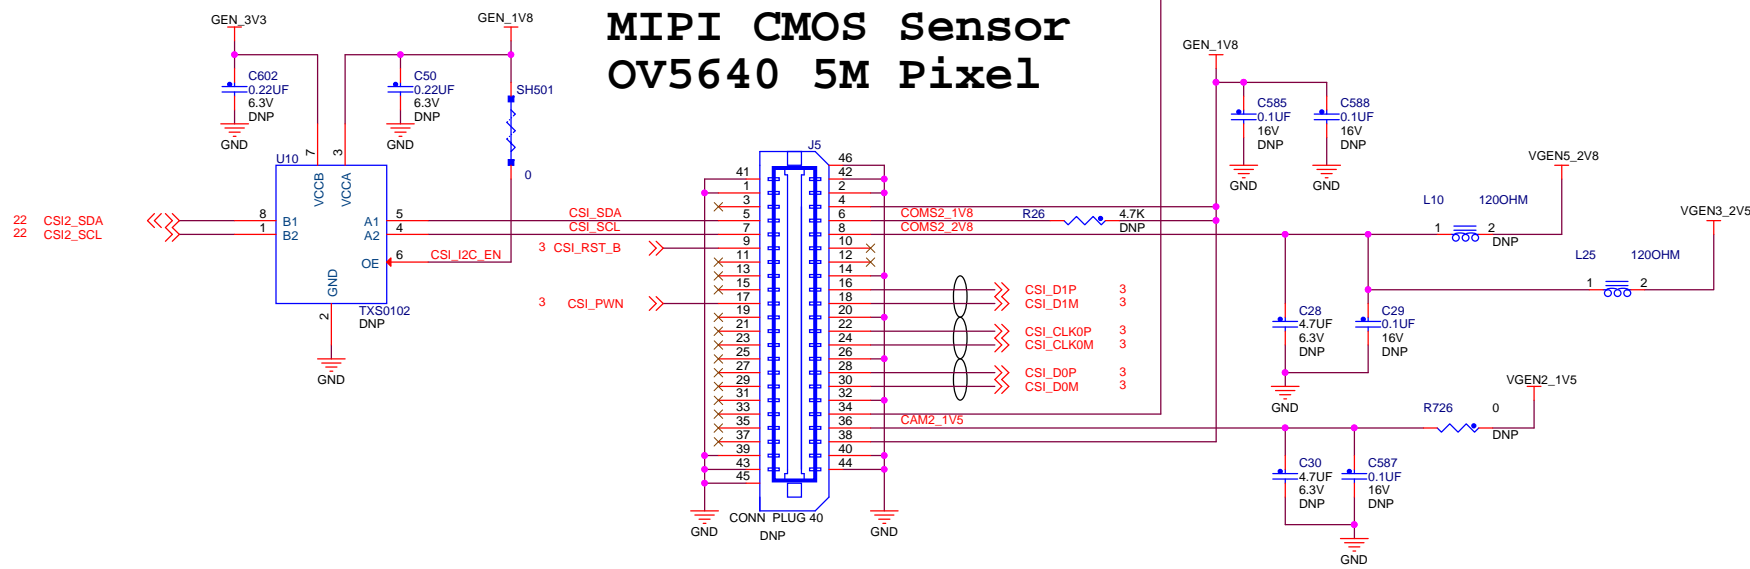

MIPI Connector

NOTE:
The Camera Analog Power supply has been moved to VGEN3. Freescale SW will program VGEN3 to operate at 2.8V. L25 and L26 are now populated and L10 and L17 are depopulated. See the Freescale HW User Guide for the Smart Device board for details (to be published 4Q12).

Place R158 and R159 near U15. Acts as source termination.

NOTE:
 Due to placement requirements on the SABRE SD board set, layout routing for the USB_OTG_DP and USB_OTG_DN traces are sub-optimal. It is recommended that customers consider using the USB layout on the Freescale i.MX6 SABRE AI board as a better example of proper USB trace routing.

Layout: 90ohm differential pairs

ESD Protection

NOTES:
 1. R103 populated in A position to prevent USB_5V path to battery charge ICs when no batteries are attached. To enable charging batteries from USB, move resistor from Position A to Position B.

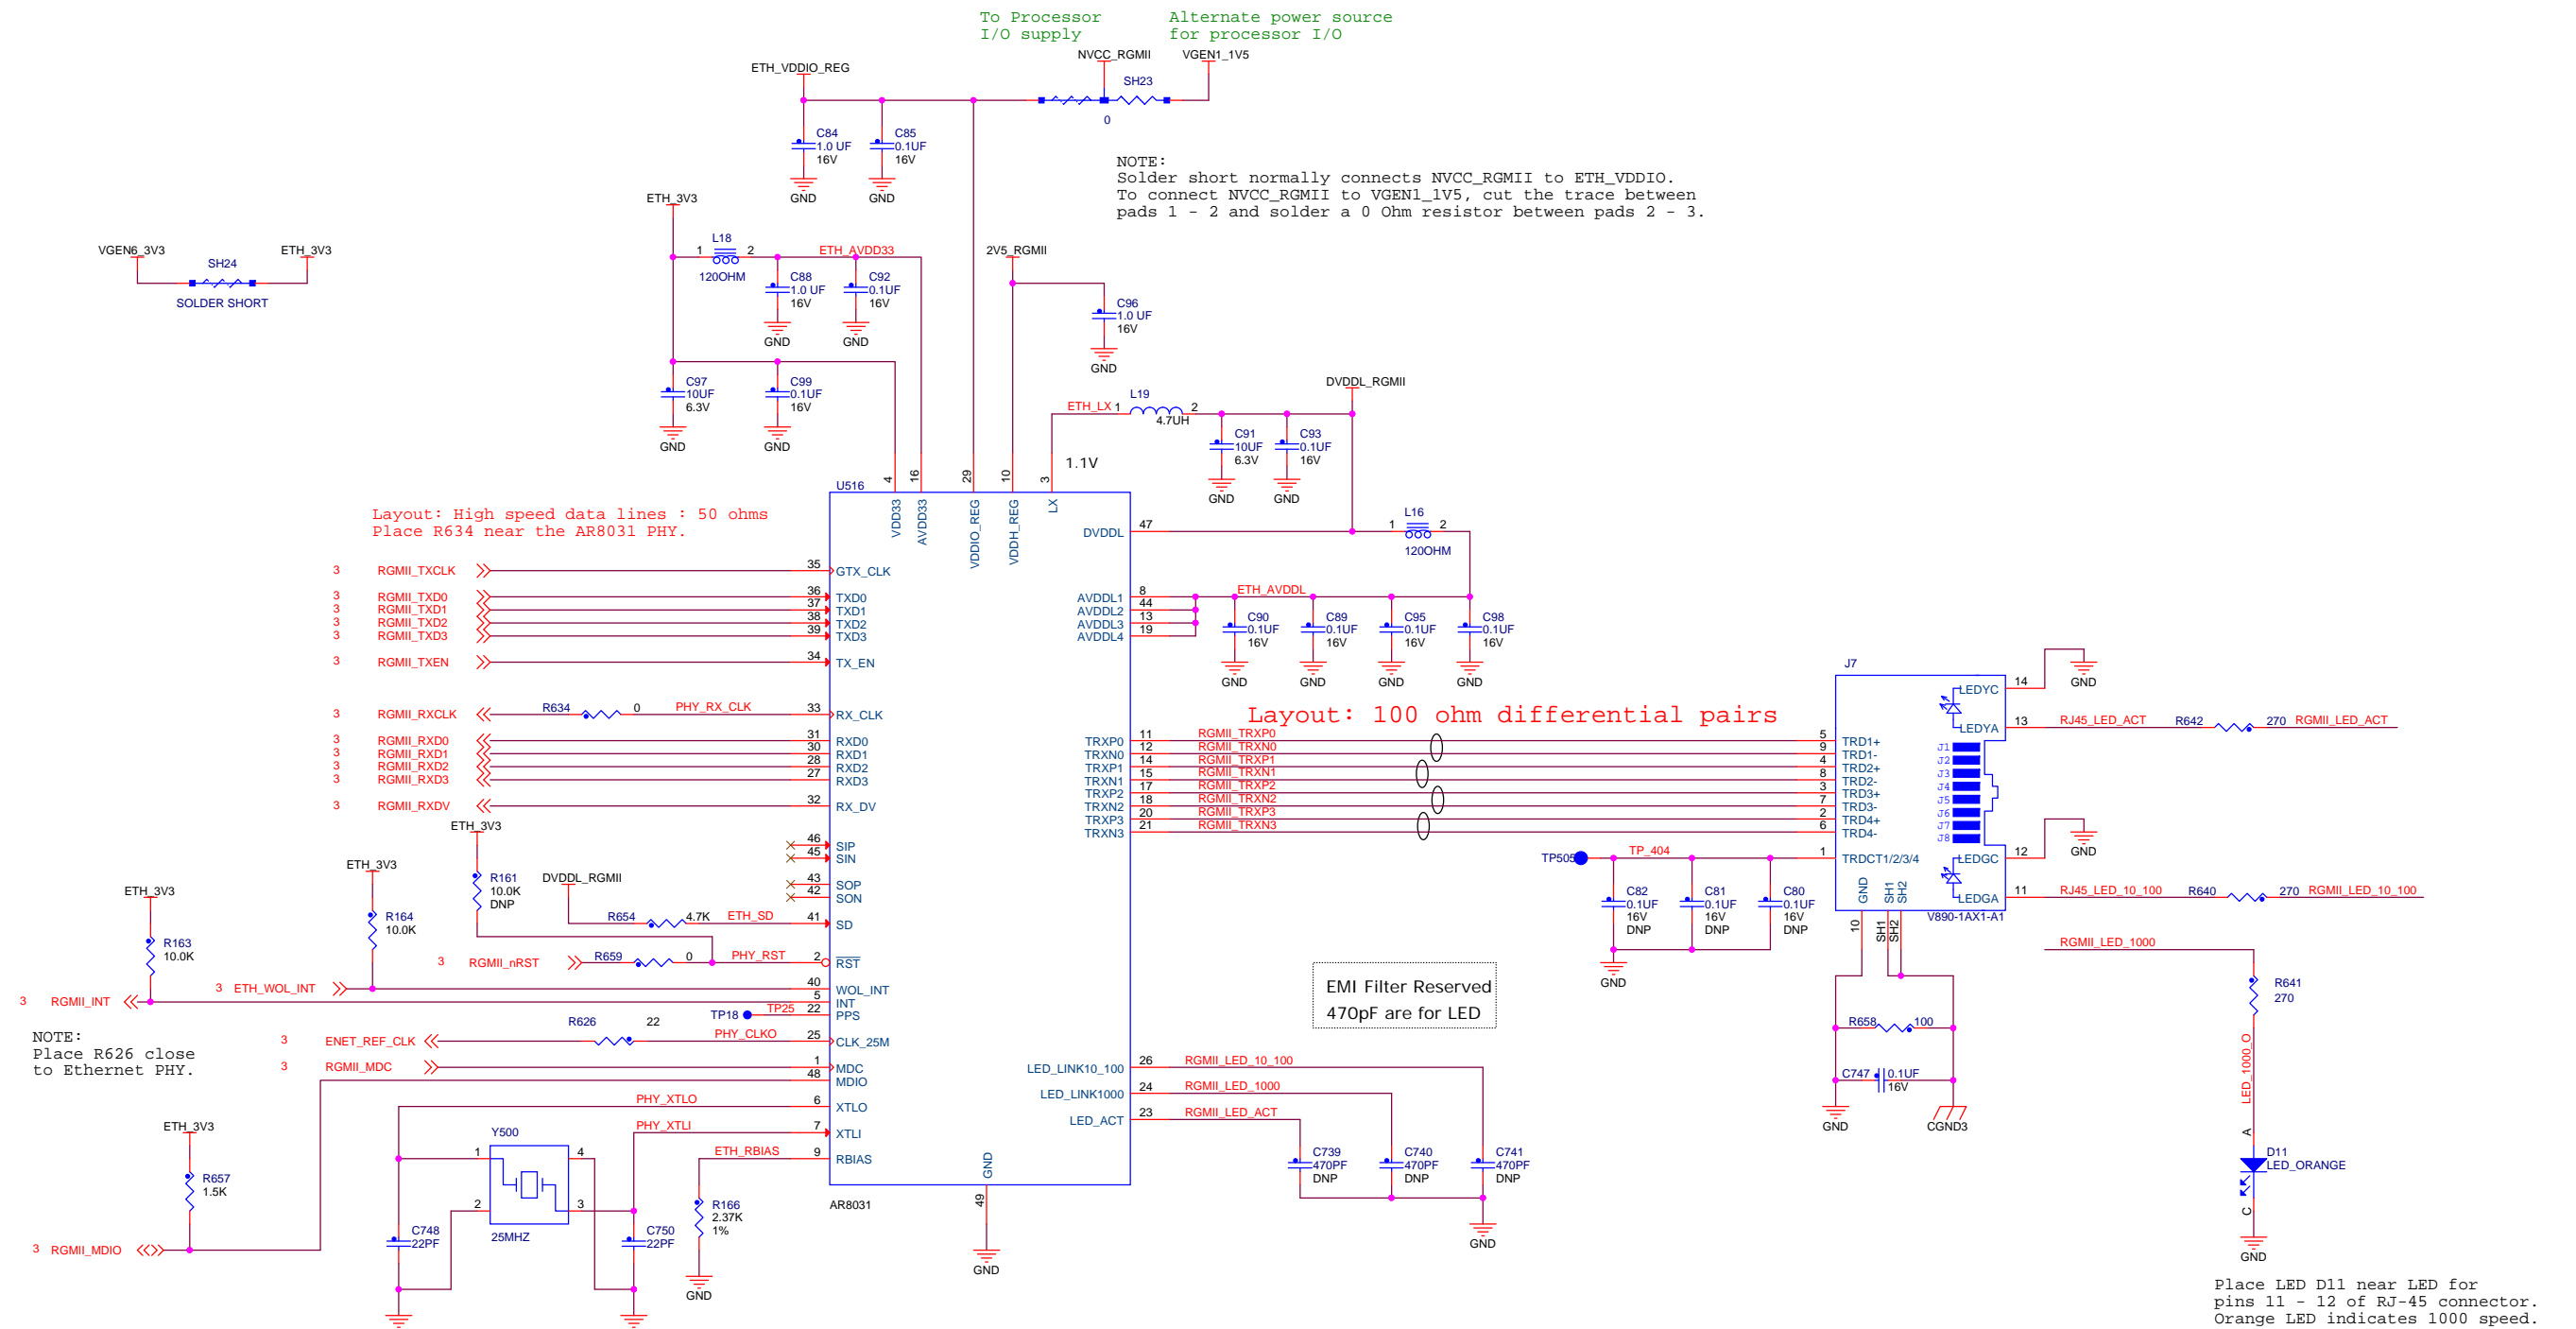

TRUTH TABLE
 OTG_VBUS INPUT TO BATTERY CHARGERS

USB_OTG_PWR_EN	OTG_PWR_ON	OTG_PWR_ON_B	OTG_VBUS_CHGR
LOW	HIGH	LOW	POWERED
HIGH	LOW	HIGH	NOT POWERED

NOTE:
 On all three pad resistor options, resistors are to be initially populated on pads 1 - 2 (Option A). Users may move resistors from their default locations as needed.

Ambient Light Sensor

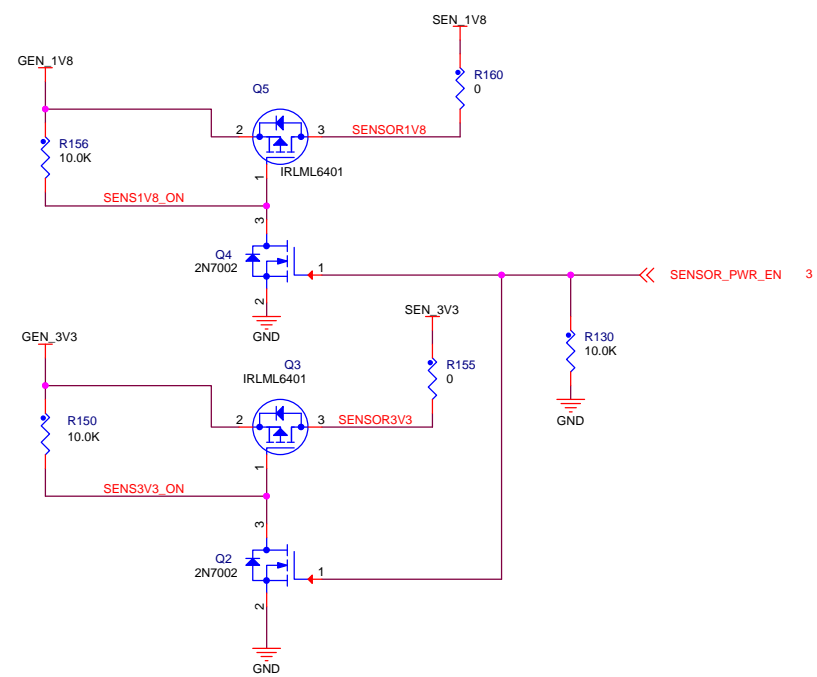

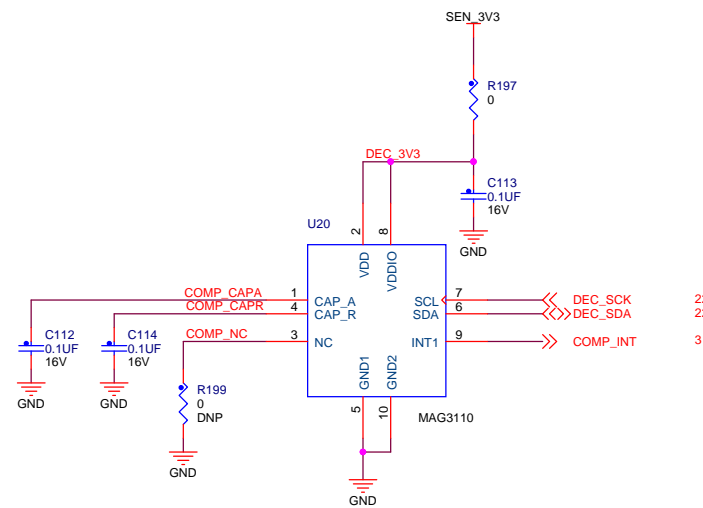

3-AXIS ACC

Barometer

Digital eCompass

AUX SDIO CARD SOCKET

Layout:
50ohm, SD signals(SD_DATAx, SD_CMD, SD_CLK) length equal

BLUETOOTH CABLE CONNECTOR

Note:

To use J13, populate resistors R209 - R213 and depopulated the SPI NOR FLASH U14. Resistors R214 and R215 should not be populated because both UART outputs (TXDs) have been crossed together and both UART inputs (RXDs) have been crossed together. To make the UART work correctly, solder a jumper wire from R215 pad 1 to R214 pad 2 and from R215 pad 2 to R214 pad 1.

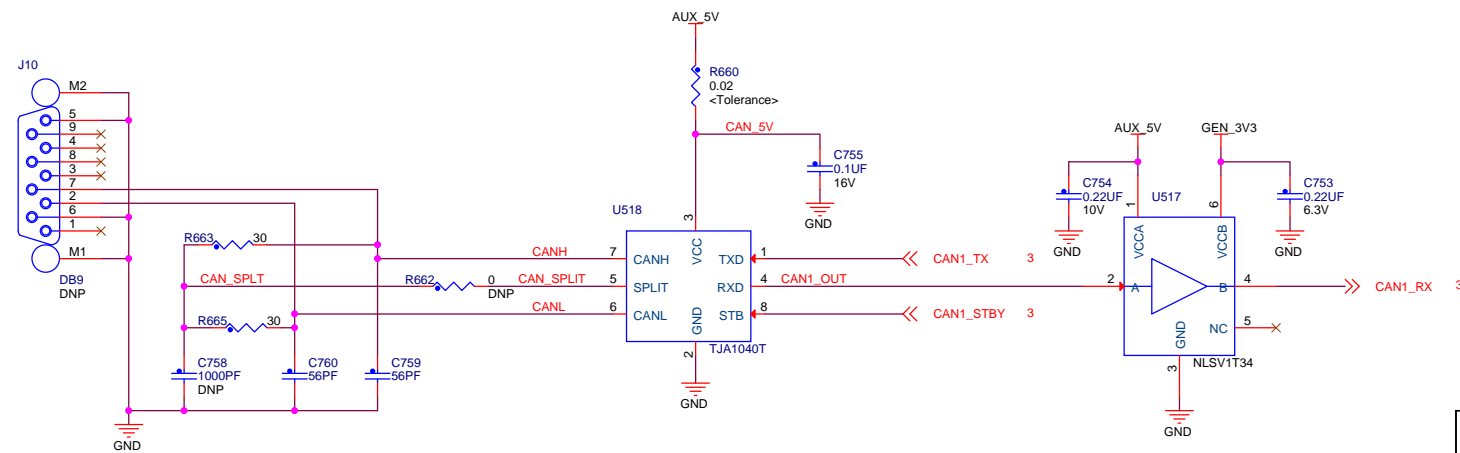

NOTE:
The AUX SDIO CARD SOCKET and the BLUETOOTH CABLE CONNECTOR have been designed and tested specifically for use with the WIFI/BT combo card SX-SDCAN-2830BT. Developed and sold by Silex Technolgy. The developer may need to consult the datasheet of other WIFI solutions for compatibility with this card socket.

NOTE:
Pin 1 of the cable connector on the Smart Device board is opposite Pin 20 of the WIFI/BT module. For the FFC to lie flat, the pin order number needs to be reversed on the schematics.

NOTE:
J13 has been provided for testing the Bluetooth functionality of the SX-SDCAN-2830BT module. This part of the circuit has not yet been tested, which is why the initial boards are being shipped with isolation resistors R209 - R215 depopulated. Until fully tested, the developer assumes responsibility for enabling J13 for testing purposes. See the Freescale HW User Guide for the Smart Device board for details (to be published 4Q12).

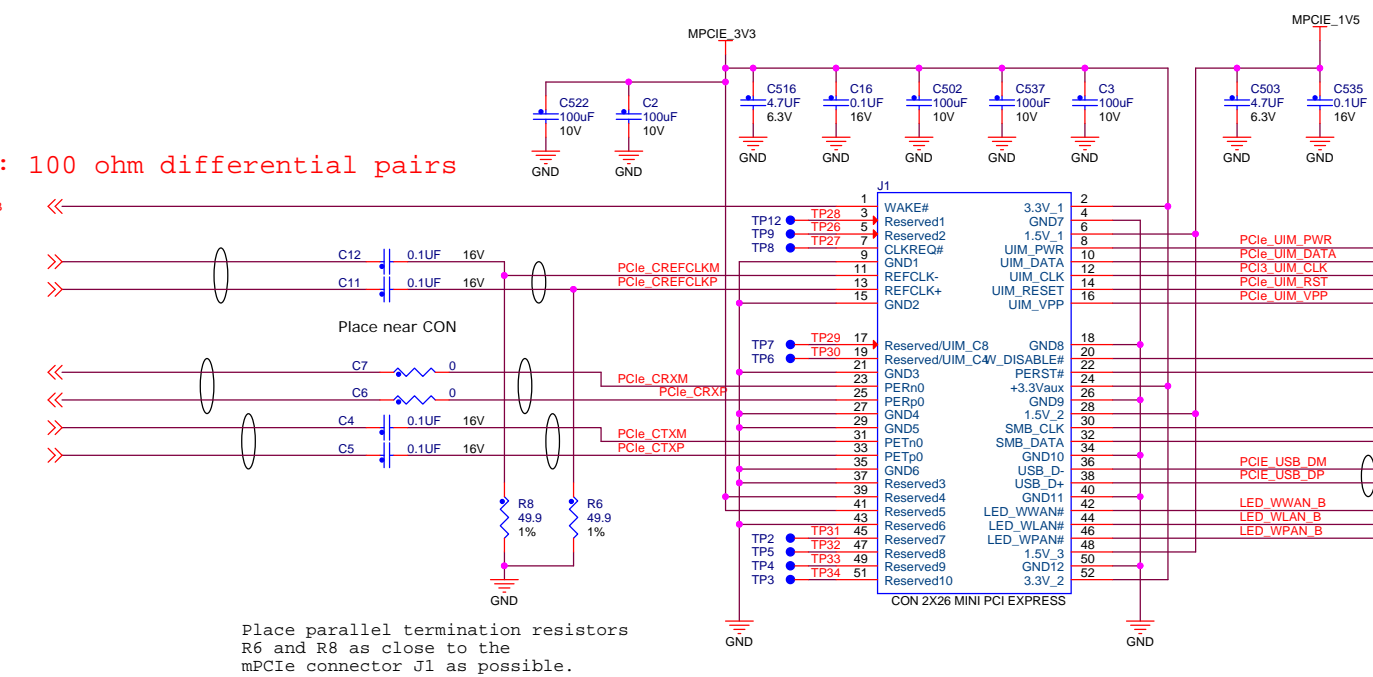

OPTIONAL CAN PINOUT

Mini-PCIE

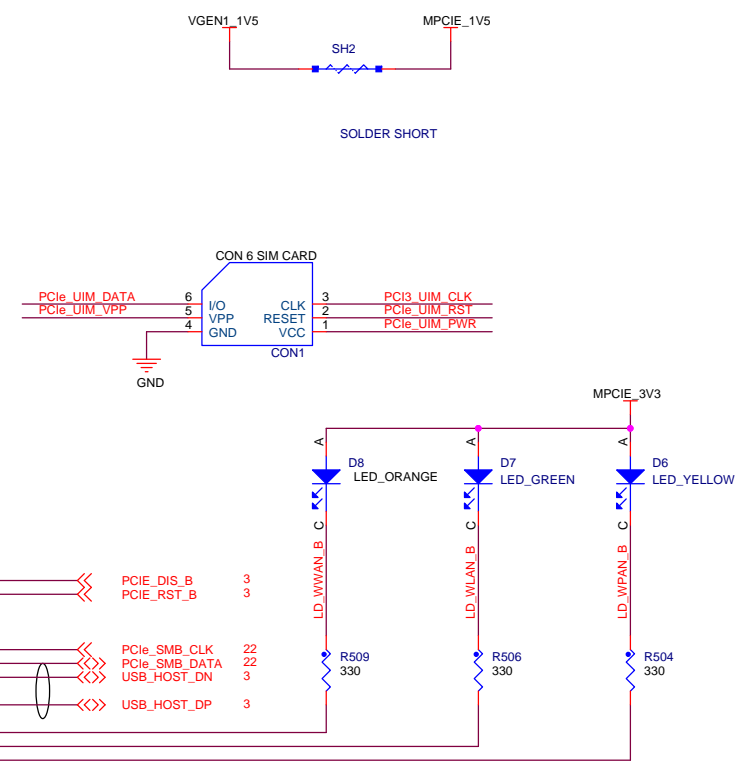

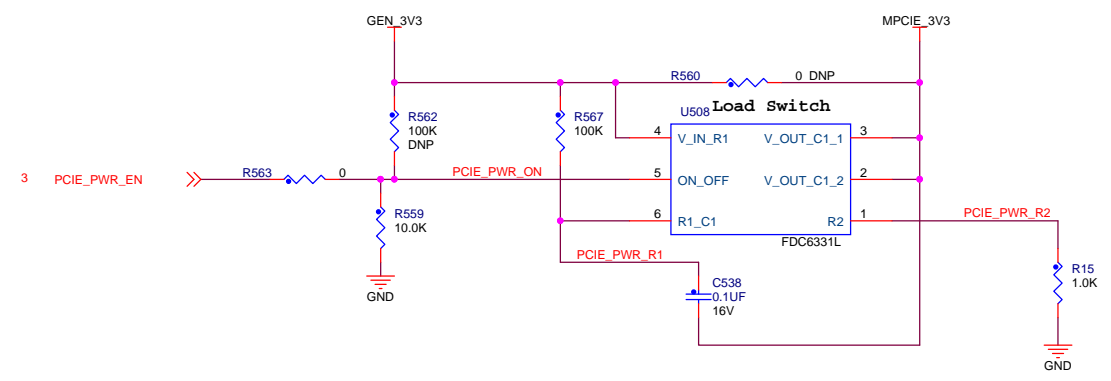

Layout: 100 ohm differential pairs

- 3 PCI_WAKE_B
- 3 CLK1_N
- 3 CLK1_P
- 3 PCI_RXM
- 3 PCI_RXP
- 3 PCI_TXM
- 3 PCI_TXP

Place parallel termination resistors R6 and R8 as close to the mPCIe connector J1 as possible.

NOTE:
This design assumes a normal loading on the MPCIE_3V3 rail of up to 1A. PF0100 SW2 can supply a maximum of 2A current. If more than 1A loading is desired, the designer must consider other load on the GEN_3V3 rail and depopulate other loads to allow additional loading on the MPCIE_3V3 rail. The MPCIE_1V5 rail is allowed a maximum of 100 mA.

Note:
To turn off board "AUTO ON" feature, depopulate R30 and R31, and populate U509. This feature has not yet been tested.

Note:
PMPF0100 Pass1.0 through Pass1.2 are subject to boot issues if power is removed from the board and reapplied within ~ 2 minutes. PMPF0100 Pass2.0 will correct this issue. For more details, see the PMPF0100 ERRATA, Issue #ER19

Optional LDO

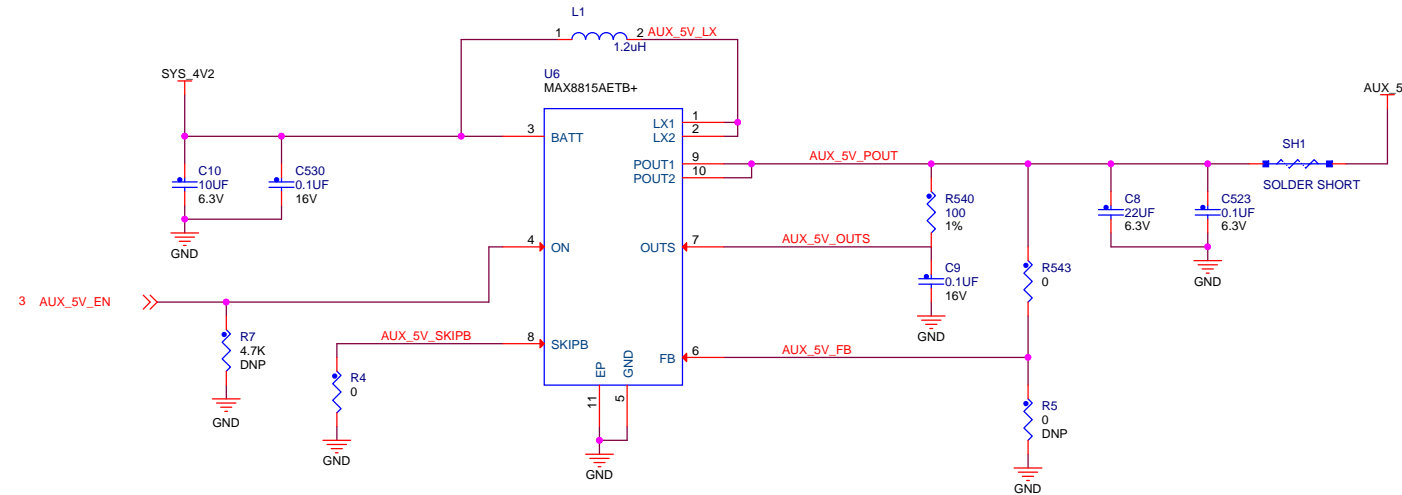

3.0V@ 300mA max

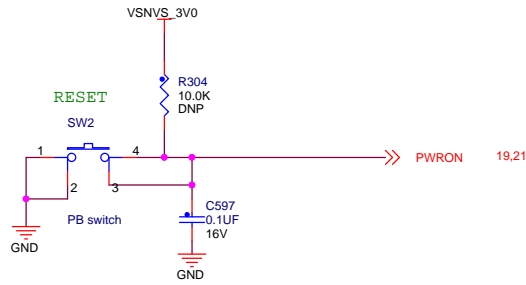

U9 is no longer required for PF0100 VSNVS issue, but may be desired for NVCC_PLL_VOUT. It is being left in a depopulated condition. If the LDO is needed, R34 and R35 should be populated as follows:
 For VSNVS (3.0V): R34 = 47K, R35 = 309K
 For NVCC_PLL_OUT (1.1V): R34 = 47K, R35 = 82.5K

NOTE FOR VDDHIGH_IN LOADING ON VGEN5:
 VDDHIGH was placed on VGEN5 early in the design as a compromise solution for a board designed primarily for software development. Validation of the i.MX6 processor has shown that operations at elevated temperatures may cause VDDHIGH_IN to require much more current than VGEN5 can supply. It is recommended for robust designs potentially operating at more extreme temperatures for VDDHIGH to be supplied from a power rail that can supply 250 mA or more. This allows for datasheet maximum of 125 mA for internal VDDHIGH_IN loads plus 125 mA for external PHY IO loads.

The optional LDO U9 shown on this page could be reconfigured to supply both VDDHIGH_IN and VDD_SNVS_IN loads to meet the additional current requirements

5.0V@1A DC2DC

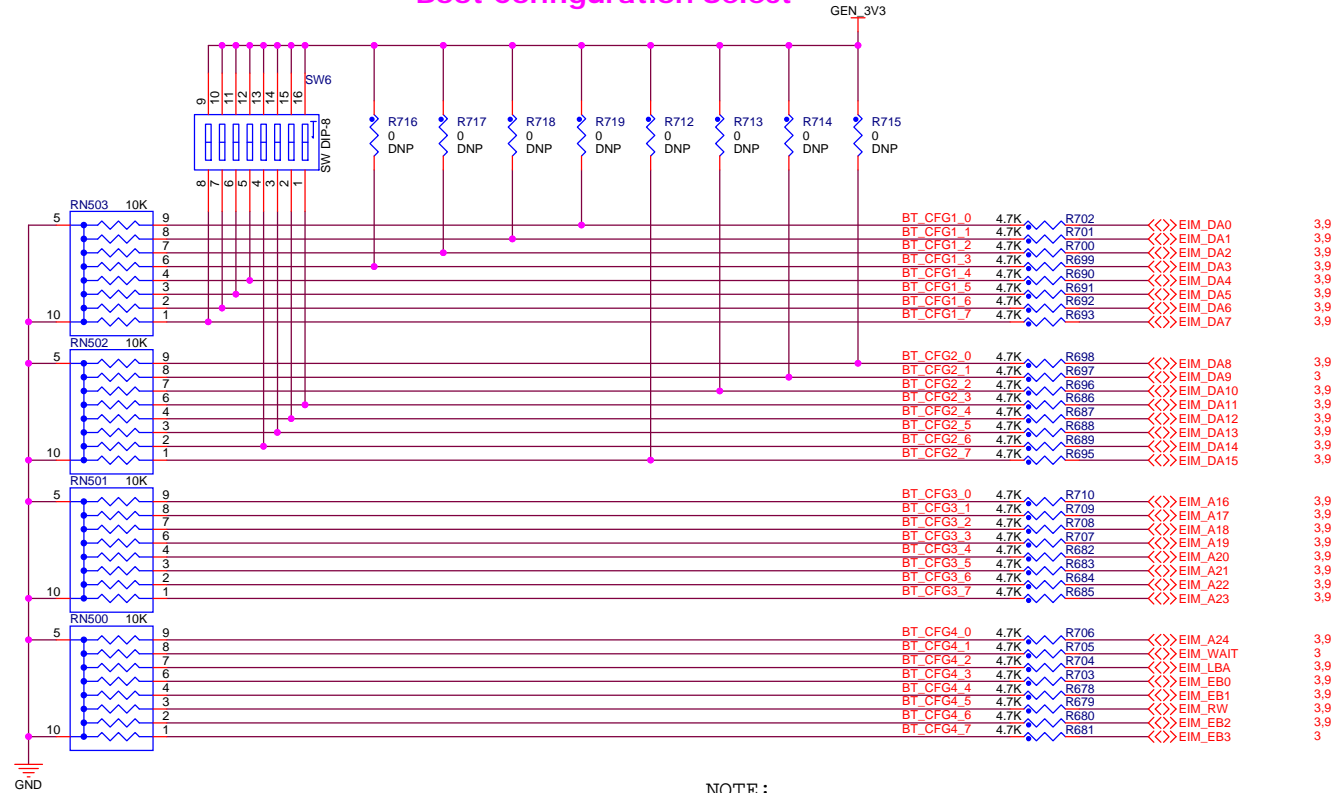

NOTE:
On Rev B4 and later designs, the RESET button is connected directly to the PWRON input of the PMIC. This will cause a complete board reset (Processor & PMIC) when the RESET button is pressed.

U/I KEY

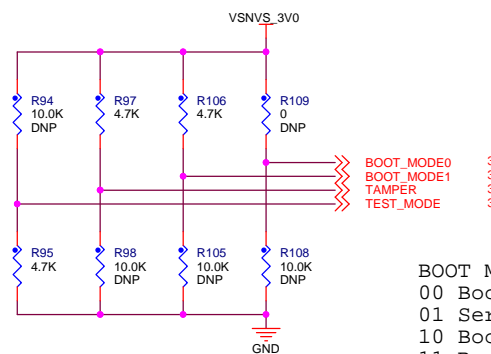

Boot Configuration Select

NOTE:
Place series resistors so as to minimize EIM portion of trace length. Two layout possibilities include:
1) As close to processor as possible.
2) Close to other components using EIM signals.

I2C1

NOTE:
R183 and R189 were changed to bring I2C rise time from LOW >> HIGH within electric specification. If using a CODEC other than the one used in this design, it may be possible to switch pull up resistors back to 4.7K.

I2C2

I2C3

CSP11

NOTE:
On all three pad resistor options, resistors are to be initially populated on pads 1 - 2 (Option A). Users may move resistors from their default locations as needed.

HISTORY OF TEMPORARY DEVIATIONS

TDA 4100

1. Digital microphone ANALOG DEVICES ADMP421 was used in place of WOLFSON WM7230 due to supply shortage. Affects U500 and U520.

TDA 4112

Replaced TDA 4100
 1. Digital microphone ANALOG DEVICES ADMP421 was used in place of WOLFSON WM7230 due to supply shortage. Affects U500 and U520.
 2. Q512 was depopulated due to schematic mistake. Removes battery charge from USB option.
 3. Depopulate R30 on MCIMX6DL-SD boards only. i.MX6DL Processor configured for Smart PMIC mode. Not compatible with board design. Removes SW ability to shutdown the board.

TDA 4136

1. Solder a 0402 2.2M Ohm resistor across pins of C55. Some i.MX6Q Processors require this resistor to stabilize the 24MHz crystal circuit, in order to start up within the required time interval.

TDA 4221 (6DL) / TDA 4222 (6Q)

1. Schematic revision B3 changed DDR3 memory to MT41K128M16JT-125:K. Due to unavailability of new part, this TDA authorizes the continued use of MT41J128M16HA-15.
 2. Change C540 to 1.0uF capacitor.
 3. Change resistors R183 and R189 to 2.37K Ohm resistors.

TDA 4275

1. Remove buffers U500 and U520 from digital Microphone data signal. Replace with hand wire mod.
 2. Add WDOG_B reset capability (UX1, RX2, CX1).
 3. Add diode DX1 to EIM_D19 to allow GPIO sense of power button press.
 4. Change RESET button press to connect to PMIC PWRON pin. RESET press now causes global reset.
 5. Add 10K pull down resistor RX3 to SDCKE0 pin.
 6. Depopulate Resistors R174 and R176 to disconnect LVDS0 EDID from I2C2 communications channel.
 7. Populate Battery Connector Header CON3.
 8. Populate SIM Card Connector CON1.
 9. Remove U1 from BOM (in preparation for next revision MX 6 silicon).
 10. On MCIMX6DL-SDP boards, populate resistor R30 with 1K Ohm resistor.

TDA 4425

1. Depopulate ferrite beads L10 and L17.
 2. Populate ferrite beads L25 and L26 (with Murata BLM18PG121SH1).

TDA 4502

1. Change R17, R21, R25, R27, R68, R85, R582, and R660 to 0.5% resistors due to parts availability.

TDA 4516

1. Change R17, R21, R25, R27, R68, R85, R582, and R660 to 1.0% resistors due to parts availability.

TDA 4538

1. U8 PMIC was installed without F0 programming (U8 not stamped F0). TDA is to program part in place.

CHANGE REVISION DEFECT TRACKING

REV:	Change:	Reference Defect Number:
B4	Removed buffers U500 and U520 from digital microphone data outputs.	ENGR00181056 ENGR00211969
B4	The Battery Charge Done LED is disconnected and R522 is depopulated. New parts RX2, CX1 and UX1 are added. Traces show required hand modifications.	ENGR00211943
B4	Optional Power On Circuit has been disabled and U511 and R578 are now DNP. A new Diode DX1 has been added to allow EIM_D29 to sense a button	ENGR00181039 ENGR00211948
B4	RESET button SW2 now connects to The PWRON pin of The PMIC.	ENGR00211979
B4	Added 10K pull down resistor RX3 to SDCKE0 trace.	ENGR00211962
B4	SIM Card Connector CON1 is now populated by default.	ENGR00224087
B4	Battery Connector Header CON3 is now populated by default.	ENGR00224089
B4	Changed resistors R174 and R176 and to depopulated by default. LVDS0 EDID will not be connected to I2C2 channel unless needed.	ENGR00211965
B4	Replaced digital microphones with Analog Devices ADMP421.	ENGR00211964
B4	Disabled USR_DEF_GRN_LED circuit. Configured GPIO_1 for WDOG_B output.	ENGR00211973
C	Q512 is Changed to populated.	ENGR00211943
C	Optional Start Up Circuit has been modified.	ENGR00181039
C	PMIC Programming Micro-Processor is removed.	ENGR00224090
C	Add DNP Input to U13 buffer for USB_OTG_PWR_EN. Buffer now powered from GEN_3V3.	ENGR00319341
C	FA_ANA and VDD_FA signals now connected to ground.	ENGR00213511
C	Added resistor options to EIM_DA7 trace to EPD connector.	ENGR00181054 ENGR00211953
C	Connected EIM_DA9 to EPDC Connector J508 to supply SDCE5 if needed.	ENGR00213510
C	Optional LDO U9 is now depopulated.	ENGR00224091
C	Added Connector J13 to support BT from SDIO Card. Connector is isolated by DNP resistors on Rev C boards.	ENGR00181035 ENGR00211946
C	Added GPIO control of Battery Charge Enable pins.	ENGR00217643
C	Changed C594 to 0.22uF, changed C31 to 47uF, added C555 as second 22uF capacitor in parallel with C546, changed C561, C562, C586 and C596 to 0.47uF. Changes made per recommendation of MMPF0100NPEP team.	ENGR00224093
C	Added additional 47uF bulk capacitor C769 to SD2 socket VDD supply.	ENGR00224094
C	Added option to route HDMI DDC comms separate from I2C2 comms channel.	ENGR00215026
C	C597 populated to provide de-bounce to RESET circuit.	ENGR00224095
C	Depopulated C68, C612. Populated C682, C716 closer to pins.	ENGR00224096
C	Depopulated C39, C606, C607, C608, C609, C610, C673 and C681.	ENGR00224097
C	Added DNP R302 to provide alternate 5V supply path to USB_H1_VBUS.	ENGR00224098
C	Added DNP R632 to provide alternate gating of PMIC_5V source (tied to VDDSOC).	ENGR00224098
C	Added DNP L25 and L26 to provide alternate 2.8V supply path to camera modules.	ENGR00224099
C	Added TP31, TP32, TP509, and TP510 to bring out third data lane for both LVDS0 and LVDS1.	ENGR00214325 ENGR00214502
C	Change blocking capacitors C6 and C7 to Zero Ohm resistors R307 and R308. PCIe specification requires blocking capacitors to be on transmit side of	ENGR00226040
C2	Depopulate L10 and L17. Move Ferrite beads to L25 and L26	ENGR00231769
C3	Changed R97 and R106 pull up resistors to 4.7K to reduce current on VSNVS	ENGR00237171
C3	Changed R19 to 10K pull up resistor to prevent WDOG reset during POR.	ENGR00234394
C3	Added note to BlueTooth connector that RXD and TXD traces are crossed.	ENGR00239363
