Inside Config Tool V3.0 offline

Create a new configuration

Select SDK Package

⦿ Start development with the selected MCUXpresso SDKv2 Package (SDK can be obtained at http://mcuxpresso.nxp.com)

Select SDK folder: C:\Users\r43125\Desktop\K15z SD ▾ [Browse...]

○ Create new configuration

Use this option to create empty configuration for selected processor/board/kit/template or create configuration from existing SDK example project.

⦿ Clone an example project

Select this option if you want example project with all sources for selected toolchain. The project will not be editable using MCUXpresso Config Tools.

○ Start development without an MCUXpresso SDK Package

Use this option if you have not downloaded an SDK package yet. Tool will be limited to only Pins and Clocks Tools. It is possible to specify SDK path later.
